6. TROUBLESHOOTING

If you encounter issues with your headset, refer to the following common solutions:

6.1 No Sound from Headset

- **Check Connections:** Ensure the 3.5mm audio jack is fully inserted into the correct port on your device or PC adapter.

- **Volume Level:** Verify that the volume wheel on the inline control is turned up and that your device's volume is not muted or set too low.
- **Device Settings:** For PCs, check your sound settings to ensure the headset is selected as the default playback device. For consoles, verify audio output settings (e.g., "Output to Headphones" set to "All Audio" on PS4/PS5).
- **Test on Another Device:** Connect the headset to a different device (e.g., a smartphone) to determine if the issue is with the headset or the original device.

6.2 Microphone Not Working

- **Check Mute Switch:** Ensure the microphone mute switch on the inline control is in the "unmuted" position.
- **Check Connections:** For PCs, ensure the microphone jack (red) from the PC adapter is correctly plugged into the microphone input port. For consoles/laptops with combo jacks, ensure the single 3.5mm jack is fully inserted.
- **Device Settings:** Verify that the headset microphone is selected as the default recording device in your computer's sound settings or console's audio settings. Adjust microphone input levels as necessary.
- **Application Settings:** Check microphone settings within the specific game or communication application you are using.

6.3 LED Lights Not Functioning

- **USB Connection:** Ensure the USB plug is securely connected to an active USB port on your PC, console, or a USB power adapter. The LEDs require USB power to operate.
- **Power Source:** Try connecting the USB to a different USB port or power source to rule out a faulty port.
