6. SETUP

6.1 Binding the Receiver

As a Bind-N-Fly (BNF) Basic model, the Apprentice STS 1.5m comes with a Spektrum 6-Channel Receiver. You will need to bind this receiver to your compatible Spektrum DSMX/DSM2 aircraft transmitter. Refer to your transmitter's manual for specific binding procedures. Ensure the aircraft is powered on and the receiver is in binding mode before initiating the binding process from your transmitter.

6.2 Pre-Flight Checks

- **Control Surface Check:** Verify that all control surfaces (ailerons, elevator, rudder) move freely and in the correct direction in response to transmitter inputs.
- **Battery Security:** Ensure the flight battery is fully charged and securely installed in the aircraft's battery compartment.

- **Propeller Clearance:** Check that the propeller is free from obstructions and securely attached.
- **Center of Gravity (CG):** Confirm the aircraft's center of gravity is within the recommended range as specified in the full product manual.

7. OPERATING INSTRUCTIONS

7.1 SAFE Technology

The Apprentice STS 1.5m features exclusive SAFE (Sensor Assisted Flight Envelope) technology, which provides multiple flight modes to assist new pilots:

- **Beginner Mode:** Offers pitch and bank angle limits, automatic self-leveling, and assisted take-offs and landings. This mode is highly recommended for first flights.
- **Intermediate Mode:** Provides larger pitch and bank angle limits with self-leveling, allowing for more maneuverability while still offering stability assistance.
- **Experienced Mode:** Removes pitch and bank angle limits and self-leveling, providing full control for advanced maneuvers.

7.2 Take-Off

Position the aircraft into the wind on a smooth surface. Gradually increase throttle while applying slight up-elevator to lift off. The wide-stance tricycle landing gear aids in stable ground handling.

8. MAINTENANCE

Regular maintenance ensures the longevity and performance of your Apprentice STS 1.5m RC Airplane:

- **Inspection:** Before each flight, inspect the airframe for any damage, cracks, or loose components. Check control surfaces, linkages, and propeller for proper function and security.
- **Cleaning:** Clean the aircraft after each flight, especially if flying in dusty or dirty conditions. Use a soft cloth to wipe down surfaces.
- **Battery Care:** Follow all instructions for charging, discharging, and storing LiPo batteries to prevent damage and ensure safety.
- **Motor and ESC:** Periodically check the motor and Electronic Speed Controller (ESC) for signs of wear or overheating.
- **EPO Material:** The durable EPO material is designed to withstand typical flying punishment. Minor dents or creases can often be repaired with heat or appropriate foam-safe adhesives.

9. TROUBLESHOOTING

This section addresses common issues you might encounter:

- **Aircraft Not Responding:** Ensure the transmitter and receiver are properly bound and powered on. Check battery levels in both the aircraft and transmitter.
- **Poor Flight Performance:** Verify the Center of Gravity (CG) is correct. Check for any damage to control surfaces or propeller. Ensure all control linkages are free and correctly adjusted.
- **Motor Not Spinning:** Check battery connection, ESC connection to the motor, and ensure the throttle trim is at its lowest setting.
- **Unstable Flight:** Re-check control surface throws and ensure SAFE technology is correctly configured for your skill level. Verify no damage to the flight controller or servos.
