FIRST USE AND FIT

- 1. Unpacking:** Carefully remove the jacket from its packaging.
- 2. Initial Inspection:** Check for any visible damage or defects.
- 3. Adjusting Fit:** The jacket features a full-zip front closure and may include drawstrings at the hem to cinch the bottom for a snug fit, preventing cold air entry. Adjust as needed for comfort and warmth. The collar is designed to extend up the neck to provide additional protection from the cold.

USAGE GUIDELINES

To maximize the performance of your insulated jacket:

- **Layering:** For extreme cold, wear appropriate base and mid-layers underneath the jacket. The Omni-Heat reflective lining works by reflecting your body heat, so effective layering enhances this function.
- **Zipper Operation:** Ensure the main zipper is fully closed for maximum warmth. Utilize the secure hand pockets for small items or to keep hands warm.
- **Weather Protection:** While the fabric is water-resistant, it is not fully waterproof. For heavy rain or prolonged exposure to wet conditions, an additional waterproof outer shell is recommended.

MAINTENANCE AND CARE

Proper care will extend the life and performance of your jacket. Always refer to the care label inside the garment for specific instructions.

- **Washing:** Hand Wash Only. Do not bleach.
- **Drying:** Lay flat to dry or tumble dry on low heat with tennis balls to help fluff the insulation. Ensure the jacket is completely dry before storing to prevent mildew.
- **Storage:** Store in a cool, dry place. Avoid compressing the jacket for extended periods, as this can reduce the loft of the insulation.
- **Stains:** Spot clean minor stains with a mild detergent and a soft cloth.

TROUBLESHOOTING

Issue	Possible Cause / Solution
Jacket does not feel warm enough.	Ensure the jacket is fully zipped and drawstrings (if present) are tightened. Consider wearing additional layers underneath, especially in very cold conditions. Verify the fit is not too loose, allowing cold air to enter.
Zipper is difficult to operate.	Check for fabric caught in the zipper. Ensure the zipper teeth are clean. Apply a zipper lubricant if necessary.
Jacket appears flat or less puffy after washing.	This can happen if insulation clumps. Tumble dry on low heat with a few clean tennis balls to help redistribute and fluff the insulation. Ensure it is completely dry.
