Safety Instructions

Please read and understand all safety instructions before using this product. Failure to follow these instructions may result in electric shock, fire, or damage to the product and connected devices.

- **UL Listed:** This power strip conforms to UL 1363 and UL 1449 standards, ensuring safety and quality.
- **Indoor Use Only:** Do not use this power strip outdoors or in wet environments.
- **Avoid Overloading:** Do not exceed the electrical ratings of 15A / 120V / 1800W. Overloading can cause the circuit breaker to trip or lead to fire hazards.
- **Surge Protection:** The 500 joules surge protection rating helps protect connected electronics from power surges, spikes, and lightning.
- **Circuit Breaker:** The integrated 15 Amp circuit breaker provides overload protection. If an overload occurs, the circuit breaker will trip, cutting power to the outlets.
- **Proper Grounding:** Always plug the power strip into a properly grounded 3-prong wall outlet.
- **Keep Away from Water:** Do not expose the power strip to water or other liquids.
- **Do Not Disassemble:** Do not attempt to open or modify the power strip. There are no user-serviceable parts inside.

Setup

1. **Unpack:** Carefully remove the power strip from its packaging.
2. **Placement:** Choose a dry, indoor location for the power strip, ensuring the 15-foot cord can reach your desired devices and a wall outlet without tension.

3. **Mounting (Optional):** If wall mounting, use appropriate screws (not included) with the two keyhole slots on the back of the power strip. Ensure the mounting surface is secure and can support the weight of the power strip and connected devices.
4. **Connect to Power:** Plug the power strip's flat plug into a standard, properly grounded 3-prong 120V AC wall outlet.

Operation

1. **Power On/Off:** Press the red power switch located on the power strip to turn it on or off. When the switch is illuminated, power is supplied to the outlets.
2. **Connect Devices:** Plug your electronic devices into the available 3-prong outlets on the power strip.
3. **Overload Protection:** If the total power draw of connected devices exceeds 15 Amps (1800W), the integrated circuit breaker will automatically trip, and the power switch will turn off. This protects your devices and the power strip from damage.
4. **Resetting the Circuit Breaker:** To restore power after an overload, first unplug some devices to reduce the load. Then, press the red power switch back to the 'ON' position.

Maintenance

- **Cleaning:** Disconnect the power strip from the wall outlet before cleaning. Wipe the exterior with a dry, soft cloth. Do not use liquid cleaners or solvents.
- **Inspection:** Periodically inspect the power cord and plug for any signs of damage, such as fraying, cuts, or bent prongs. If damage is found, discontinue use and replace the unit.
- **Storage:** When not in use, store the power strip in a cool, dry place, away from direct sunlight and moisture.

Troubleshooting

- **No Power to Outlets:**
  - Ensure the power strip's switch is in the 'ON' position and illuminated.
  - Check if the circuit breaker has tripped (power switch is off). If so, reduce the load and reset the switch.
  - Verify that the wall outlet is functioning by plugging in another device directly.
  - Ensure the power strip's plug is fully inserted into the wall outlet.
- **Devices Not Charging/Working:**
  - Confirm that the devices are properly plugged into the power strip.
  - Check the power cords of the individual devices for damage.
  - Test the devices by plugging them directly into a known working wall outlet.
