5. MAINTENANCE

To ensure the longevity and reliable operation of your Mighty Mule MMS100 system, consider the following maintenance tips:

- **Regular Checks:** Periodically check the physical connections of the radio module and antennas to ensure they are secure.
- **App Updates:** Keep your Mighty Mule app updated to the latest version to benefit from new features, bug fixes, and improved performance.
- **Power Monitoring:** Utilize the app to monitor the power status of your gate opener, especially if it relies on solar panels or backup batteries. This helps identify potential charging issues before they lead to system downtime.
- **Clear Line of Sight:** Ensure that the line of sight between your MMS100 Bridge unit and the gate opener remains unobstructed by new foliage or structures.

6. TROUBLESHOOTING

If you encounter issues with your MMS100 Wireless Connectivity System, refer to the common problems and solutions below:

- **Connectivity Issues:** If the app shows the gate as offline or fails to connect, ensure your home Wi-Fi network is active and the MMS100 Bridge unit is within range and has a strong signal. Try restarting your home router and the MMS100 unit.
- **"Input Power Disconnected" Error:** This error typically indicates an issue with the secondary power source (solar panel or backup battery) for your gate opener. Check the connections to the solar panel and battery, and ensure the solar panel is receiving adequate sunlight for charging.
- **App Functionality:** If the app is slow or unresponsive, ensure your smart device's operating system and the Mighty Mule app are fully updated. A poor internet connection on your smart device can also affect app performance.
- **Gate Not Responding:** Verify that the radio module is securely installed in the control box and its antenna is properly connected. Ensure the gate opener itself is powered on and functioning correctly independently of the MMS100 system.
