

SUNPOW OTMD01

SUNPOW Metal Detector Pinpointer User Manual

Model: OTMD01

Brand: SUNPOW

1. INTRODUCTION

The SUNPOW Pinpointer Metal Detector is a high-precision, fully waterproof device designed for efficient metal detection. Its 360-degree probe and multiple detection modes make it suitable for various environments, from quiet gardens to noisy outdoor settings and even underwater. This manual provides detailed instructions for setting up, operating, and maintaining your pinpointer to ensure optimal performance and a rewarding treasure hunting experience.

Image 1.1: SUNPOW Pinpointer Metal Detector with all included accessories.

2. PACKAGE CONTENTS

Please verify that all items listed below are included in your package:

- 1 x SUNPOW Pinpointer Metal Detector
- 1 x 9V Battery
- 1 x Belt Holster
- 1 x English User Manual
- 1 x Retractable Hanging Wire
- 1 x Storage Bag

3. KEY FEATURES

- **360-Degree Probe & Three Optional Modes:** The pinpointer features a 360-degree detection area, extending the detection range and minimizing target loss. It offers three distinct modes: Vibration (silent), Audio, and a combined Vibration & Audio mode, adaptable for quiet, noisy, or underwater environments.

- **Fully Waterproof Design (IP68):** Engineered for all weather conditions, this metal detector can be fully submerged in water, including lakes, rivers, ponds, and oceans, allowing for underwater treasure hunting.
- **Deep & Precise Metal Detection:** Capable of quickly and accurately targeting objects up to 11 cm (4.3 inches) deep. It can detect various metals such as iron, aluminum, gold, bronze, and silver, providing precise small-scale positioning that larger metal detectors cannot achieve.
- **One-Touch Operation, Lightweight & Portable:** Simple one-button control for powering on (long press) and switching modes (single click). With a length of 27 cm (10.6 inches) and a weight of 340g (0.75 lbs), it is highly portable and easy to carry.

Image 3.1: Key features and components of the SUNPOW Pinpointer.

IP68 ÉTANCHE

Entièrement étanche, adapté aux lacs, rivières, étangs et océans, etc.

Image 3.2: The pinpointer's IP68 waterproof capability.

POIDS LÉGER & PORTABLE

Emportez-le où vous voulez

Image 3.3: Portability of the SUNPOW Pinpointer.

4. SETUP

4.1 Battery Installation

1. Unscrew the battery cover located at the end of the pinpointer.
2. Insert the included 9V battery into the battery compartment, ensuring the correct polarity (+/-) alignment.
3. Securely screw the battery cover back on. Ensure it is tightly sealed to maintain the device's waterproof integrity.

5. OPERATING INSTRUCTIONS

5.1 Power On/Off

- To power on the device, press and hold the orange button for approximately 2 seconds until you feel a vibration or hear a sound (depending on the current mode).
- To power off the device, press and hold the orange button again for approximately 2 seconds.

5.2 Changing Detection Modes

The SUNPOW Pinpointer offers three detection modes:

- **Vibration Mode:** Ideal for silent operation or when working in noisy environments where audio alerts might be missed.
- **Audio Mode:** Provides clear sound alerts, suitable for general use in quiet to moderately noisy areas.
- **Vibration & Audio Mode:** Combines both alerts for maximum feedback, recommended for most treasure hunting scenarios.

To cycle through the modes, simply press the orange button once (single click) while the device is powered on.

3 MODES DIFFÉRENTS

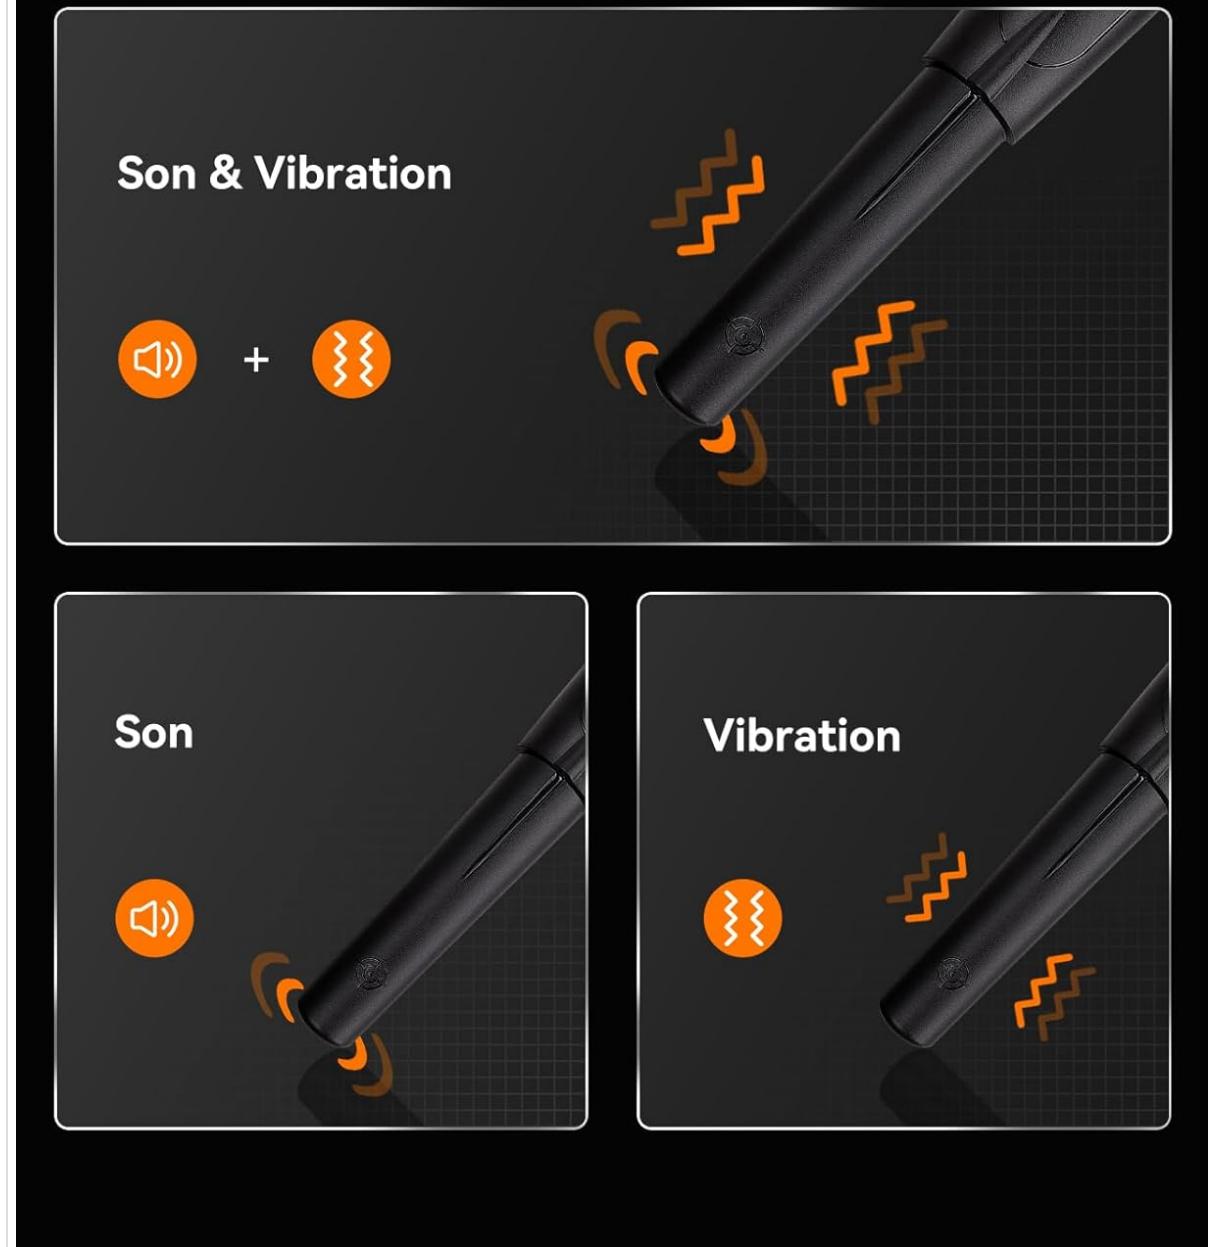

Image 5.1: The three detection modes: Sound & Vibration, Sound, and Vibration.

5.3 Metal Detection

Once powered on and in your desired mode, slowly sweep the pinpointer over the area you wish to scan. The 360-degree detection area allows for efficient scanning. As the pinpointer approaches a metal object, the vibration and/or audio alert frequency will increase, indicating proximity to the target. The closer you get, the faster the alerts will become, helping you pinpoint the exact location of the buried item.

DÉTECTION HAUTE PROFONDEUR

Image 5.2: Demonstrating deep detection up to 11.43 cm.

6. MAINTENANCE

- **Cleaning:** After each use, especially if used in wet or muddy conditions, wipe down the pinpointer with a damp cloth to remove dirt and debris. Do not use abrasive cleaners or solvents.
- **Battery Care:** If the device will not be used for an extended period, remove the 9V battery to prevent leakage and potential damage to the electronics.
- **Storage:** Store the pinpointer in a cool, dry place, away from direct sunlight and extreme temperatures. Use the provided storage bag for protection.

7. TROUBLESHOOTING

- **Device does not power on:**

- Ensure the 9V battery is correctly installed with the correct polarity.
- Check if the battery has sufficient charge. Replace with a new battery if necessary.
- Ensure the battery cover is securely tightened.

- **Weak or inconsistent detection:**

- The battery might be low. Replace the 9V battery.
- Ensure you are sweeping the pinpointer slowly and steadily over the target area.

- **False signals:**

- Environmental interference can sometimes cause false signals. Try moving to a different location.
- Ensure there are no other electronic devices or strong magnetic fields nearby.

If you encounter issues not covered here, please refer to the Warranty and Support section for assistance.

8. SPECIFICATIONS

| Attribute | Value |
|---------------------------------|---|
| Product Dimensions (L x W x H) | 27.5 x 6 x 6 cm (10.8 x 2.4 x 2.4 inches) |
| Item Weight | 300 Grams (0.66 lbs) |
| Item Model Number | OTMD01 |
| Battery(ies) | 1 x 9V (included) |
| Material | Metal |
| Power Source | Battery Powered |
| Color | Black |
| International Protection Rating | IP68 or higher |
| Adjustable Length | Yes |
| Country of Origin | China |

9. WARRANTY AND SUPPORT

Your SUNPOW Metal Detector Pinpointer is designed for durability and performance. While specific warranty details are not provided in this manual, SUNPOW is committed to customer satisfaction.

If you encounter any problems or have questions regarding your product, please do not hesitate to contact us via Amazon's messaging service. Our customer service team will do their best to provide you with prompt and effective assistance.

For the latest support information and contact methods, please visit the official SUNPOW store on Amazon or refer to your purchase documentation.

| | <p>SUNPOW OT-MD03 Metal Detector User Manual for Adults & Kids</p> <p>Comprehensive user manual for the SUNPOW OT-MD03 Metal Detector. Learn how to use this high-accuracy device, featuring an LCD display, pinpoint function, DISC mode, and a waterproof search coil, for metal detecting adventures.</p> |
| | |

3 Position the Detector:

- 1) Place the detector on a table with the search coil hanging over the edge.
- 2) Make sure the search coil is far away from walls or metal objects. Keep the search coil away from any metal objects in the room.
- 3) Turn off equipment that may interfere with electromagnetic radiation.
- 4) Turn the search coil back.
- 5) Press POWER to turn on.

3.5 Using ALL METAL Feature:

Wave all objects over the search coil and notice the different tones.

4.4 Using DRC (Discrimination) Feature:

1) Press "D" once. The bottle cap icon on LCD.

2) Press "A" once. The bottle cap icon indicator will disappear.

3) Wave the bottle cap. It will not be detected because it has been eliminated.

5.5 Using NOTCH Feature:

1) Press "N" once. The NOTCH icon is displayed on LCD.

2) Press "A" twice. Sc will flash in 3 seconds and disappear that means Sc is "notch out" (eliminated). To eliminate Sc, press "A" until Sc flash and disappear.

-10-

1) Wave Sc or 15 cm over the search coil. Sc and "Sc" will not be detected. If you want to detect Sc, turn off the NOTCH function. Notice the target categories disappear on LCD can not be detected.

If you want to pick up the target type you eliminated before, press "A" until Sc is detected. If you want to turn off the NOTCH function, wave the search coil over the target again. The NOTCH function will be turned off.

6.5 Using PINPOINT Feature:

1) Press PINPOINT button, PP will appear on LCD display.

2) Move coin continuously over the search coil.

3) Sweeping coin over search coil moves closer or further.

4) Notice that the depth indicator changes as the coin moves closer or further.

7.5 Adjusting SENR (Sensitivity):

1) Press "A" or "D" to set the SENR level displayed on LCD.

2) Press "A" or "D" to set the SENR. Sensitivity level can be set from 1 to 10.

8.5 Using VOLUME:

1) Press MENU until VOLUME is displayed on LCD.

2) Press "A" or "D" to set Volume. Volume level can be set from 0 to 10.

OVERLOAD WARNING:

If a metal object or highly magnetic are too close to the

-11-

search coil, the detector will switch and "-11" will appear on LCD display. The detector will make a rapid, repeating tone like warning sound. If you want to turn off the OVERLOAD function, move the search coil away from the metal object. If overloading occurs, keep the search coil away from the metal object.

Note: There are a wide variety of metals and no target can be identified for certain until unearthed. This table is for general identification.

OUTDOOR DETECTING

1) Find a place outside where there is no metal.

2) Place a sample you want to find on the ground.

3) Press POWER to turn on the detector.

4) Sweep the search coil gently side to side, slightly overlapping each sweep as you move forward. Keep your search coil approximately 1-2 inches above the ground as you sweep.

Notes:

- Raising it during the sweep, or at the ends of your sweep, can cause false-reads.
- Move slowly. Hurrying will cause you to miss targets.

-12-

• Most desirable objects will respond with a repeatable tone. When discriminating, iron and hi objects generally do not respond.

• False-reads can be caused by the presence of other signals, physical interference or by large irregular trash objects. These signals are easily recognized by their often broken or non-repeatable nature.

DETECTING WITH PINPOINT

After you find a target, you can use PINPOINT to find the exact location of the target to 5mm.

1) Press POWER to turn on the detector.

2) Move the search coil across the target, and you can locate it by the sound.

How to Detect a Target:

1) To narrow the response further, position the search coil near the target and turn the sensitivity up.

2) Press PP button and hold, move the search coil slowly.

3) When you hear the sound, you can release the PP.

4) Repeat the above steps.

After you are in the center of the target, the signal from the detector is the strongest.

-13-

Troubleshooting Guide

| Problem | Reason | Suggestion |
|--|---|---|
| The detector doesn't detect any targets when I'm standing on the target. | 1) The detector may receive interference and noise signal from the ground or metal objects nearby. 2) The ground or metal objects nearby are too far away. | 1) Change searching place. 2) Turn off the metal objects nearby or move the search coil to the target. |
| The detector sounds like a metal detector but it doesn't detect any targets. | 1) Sensitivity is too high, probably metal detector is too far away. 2) The ground or metal objects nearby are too far away. | 1) Decrease sensitivity. 2) Turn off the metal objects nearby or move the search coil to the target. |
| The detector does not detect any targets when I'm standing on the target. | 1) Sensitivity is too low. 2) The ground or metal objects nearby are too far away. | 1) Increase sensitivity. 2) Turn on the metal objects nearby or move the search coil to the target. |
| 1) LCD shows nothing. 2) Target submerses in water. | 1) There may be over the heat. 2) The detector can't detect the metal objects in water. | 1) Reduce the sensitivity to reduce the detection of the metal objects in water. 2) Turn off the metal objects nearby or move the search coil to the target. |
| No power, no sound. | 1) Power cable not connected. 2) Dead battery. | 1) Check cable. 2) Replace battery. |

NOTE: IF YOU EXPERIENCE A PROBLEM, PLEASE CONTACT OUR CUSTOMER SERVICE FIRST. YOU CAN REACH US AT support.servisys2019@outlook.com. OUR TEAM OF EXPERTS AND ENGINEERS ARE HERE READY TO HELP.

Care and Maintenance:

Our metal detector is an example of exterior design & craftsmanship. The following logotype will help you care for your metal detector so you can enjoy it for years to come.

Handle the detector gently and carefully. Dropping it can damage circuit boards and cases and can cause the detector to work incorrectly.

Do not expose the detector to extreme temperatures. Temperature extremes can shorten the life of electronic devices, damage the case of the detector.

Keep the detector away from dust and dirt, which can cause premature wear and damage.

Wipe the detector with a damp cloth occasionally to keep it looking new. Do not use harsh chemicals, cleaning solvents, or strong detergents to clean the detector.

-15-

Thank you for choosing the MD-620 metal detector. Please read the owner's manual carefully before operating the metal detector. If you have any questions or concerns, or if you have any problems and questions, please contact us.
Our toll-free number is 1-800-333-8333.
Other toll-free number is 1-800-333-8333.

TABLE OF CONTENTS

| | |
|---------------------|---|
| FEATURES | With your MD-620 metal detector, you can hunt for coins, jewelry, and other metal objects. It has a high sensitivity and strong ability of discrimination. It is versatile and easy to use. |
| -LCD Display | Shows the probable type of metal, the signal |

-02-

intensity, the range of DISC & NOTCH, the level of SENS and VOLUME, and battery condition. It also shows numeric display for target.

Three Tone Audio Discrimination The three distinctive tones (beep) are used to identify the type of target.

Headphones You can also use headphones to identify the target.

DISPLAY Press the DISPLAY button to change the display setting.

NOTCH Press the NOTCH button to select the NOTCH mode.

PIPED Displays the location of the target accurately.

SEARCH COIL The search coil is the part of the detector that picks up the signal of the metal to be detected.

HEADPHONE Connect headphones of 2.5mm and operate without trouble.

Waterproof Case protects the detector even when you splash it.

Adjustable Shaft Adjust the length of shaft for comfortable use.

Power Your metal detector requires two 9-volt alkaline batteries.

- 03

PREPARATION

STEP 1 Your HD-401 detector requires no assembly or tools. Simply remove the handle from the box.

- 04

STEP 2 Turn the detector 180 degrees as shown in the figure.

STEP 3 Press down the UNLOCK button to release the handle.

- 05

STEP 4 Slide out the antenna to the desired length (typically just under your elbow). And fully extend the lower shaft to the desired length for your height.

BATTERIES

Please use two 9V alkaline battery.

•Please open the battery cover and install the battery according to the diagram. Please do not mix old and new batteries, or batteries of different types. Never leave batteries in the detector.

•Do not mix the old and new batteries or different types of batteries.

•Use only fresh alkaline batteries of required size.

•Do not use rechargeable batteries. If you must use them, remove the batteries. Batteries can leak chemicals that can damage the detector.

•If the battery indicator on the front lights up, replace the battery.

- 06

USING HEADPHONES

•It is recommended to choose the headphones with volume control when using the headphones. Insert the PHONE jack. At this time the internal speaker disconnects.

•Loud Volume

•To protect your hearing, set the volume to the lowest setting when you are not using the headphones.

•Do not listen at extremely high volume levels Extended high volume levels can damage your hearing.

•Do not wear headphones while operating your detector inside your vehicle.

INSTRUCTIONS FOR CONTROL PANEL

1 POWER SWITCH

Press the power switch to turn on/off the detector.

- 07

2 LCD DISPLAY

DISPLAY INDICATOR Digital screen indicator
LOW BATT INDICATOR 9V battery indicator
SENS INDICATOR SENS indicator
SEARCH COIL INDICATOR SEARCH COIL indicator
DISPLAY CONTROL

3 CONTROL BUTTON

•MENU Press MENU to call both VOLUME, SENS, DISC, NOTCH

•VOLUME Press MENU to select VOLUME. Then press +/- to adjust the volume. The volume range is 0-100. The volume is displayed on the LCD.

•SENS Press MENU to select SENS. Then press +/- to adjust the level of sensitivity. The level will be displayed on the LCD.

•DISC Press MENU to select DISC. Then press +/- to adjust the frequency range of the detector. The frequency range is 11-25.

•NOTCH Eliminates the target you don't want. Press MENU to select NOTCH. Then press +/- to select the target to be removed. The target name mode or corner will disappear.

•MOTOR Projects the target name of the target accurately.

- 08

4 BACKLIGHT SWITCH

Press the backlight switch to turn on/off the backlight of the display.

•MEMORY This function will memorize all the settings before power is off.

5 TARGET INDICATIONS

1. Numeric range of target:

| | |
|-------|--------|
| -IRON | 00-10 |
| -TIN | 11-25 |
| -TAD | 26-40 |
| -PL | 41-55 |
| -10E | 56-80 |
| -20E | 81-95 |
| -20S | 96-100 |

Note: There are a wide variety of metals and no target can be identified with 100% accuracy. The detector is designed for general use.

2. Types of target

-IRON indicates the target is probably iron.

-TIN indicates the target is probably tin. Some coins and rings may register within this range.

-TAD indicates the target is probably tin or a nickel. Some coins can. Some small metal tags might register within this range.

-PL indicates the target is probably a piece of plastic or a metal.

-10E indicates the target is probably a piece of iron or a metal.

-20E indicates the target is probably a piece of iron or a metal.

-20S indicates the target is probably gold or silver.

- 09

3. Tones

The detector comes with three tones for different types of metal.

But the built-in audio identification system sounds a unique tone for each target type. This allows you to quickly identify the metal type of the target.

A high tone is for iron, a medium tone is for tin, a low tone is for copper.

A high tone is for 10E, 20E, same as for iron.

A medium tone is for 20S, same as for tin.

A low tone is for PL, same as for copper.

INDOOR TESTING AND USE

1 Press the power switch to turn on the detector.

2 Press the DISPLAY button to turn on the LCD.

3 DISC: Press MENU to select DISC, then set the DISC to the correct frequency range.

4 SENS: Press MENU to select SENS. Then press +/- to adjust the sensitivity.

5 VOLUME: Press MENU to select VOLUME. Then press +/- to adjust the volume.

6 If you want to pick up the target that you find, press ENTER again.

7 If you want to know the exact location of the target, you can use the PIP function.

- 10

8 Hold the detector over the object or on a floor inside a building. Most buildings have floors made of the floors which are in contact with the objects you're testing or the floor is the floor.

9 Slowly sweep a sample of the material you want the detector to identify. If the detector finds a target, it will sound a tone and the LCD will display the target name.

10 If you want to know the exact location of the target, you can use the PIP function.

11 If you want to know the exact location of the target, you can use the PIP function.

12 If you want to know the exact location of the target, you can use the PIP function.

13 If you want to know the exact location of the target, you can use the PIP function.
