TROUBLESHOOTING

- **Device Not Charging/Connecting:**

- Ensure both the adapter and the USB-C cable/device are fully and correctly inserted.
- Try connecting the USB-C cable/device directly to a native USB-C port (if available) to confirm the cable/device is functional.
- Test the adapter with a different USB-A port or power source.

- **Slow Charging:**

- Verify that your USB-A power source provides sufficient power (up to 5V/2A). Some older USB-A ports may offer lower output.
- Ensure your USB-C cable is not damaged and supports the required charging speed.

- **Data Transfer Issues:**

- Confirm that your USB-C device is set to allow data transfer (e.g., "File Transfer" mode on Android phones).
- Try a different USB-C data cable.
- Ensure your computer's USB-A port is functioning correctly.

• **Adapter Overheating:**

- While the aluminum alloy aids in heat dissipation, prolonged high-power usage can cause slight warmth. If the adapter becomes excessively hot, disconnect it immediately and allow it to cool.
- Ensure adequate ventilation around the adapter and connected devices.
