## eXuby EXBTZ812

# eXuby EXBTZ812 Tiny Dog Training Collar User Manual

Model: EXBTZ812

## 1. INTRODUCTION

---

The eXuby Tiny Dog Training Collar is designed to assist in training small dogs weighing 5-15 lbs. It offers sound, vibration, and static shock modes with 9 intensity levels, controlled by a pocket-sized remote. The collar is water-resistant and features a long-lasting rechargeable battery for convenience and durability.

### 3. SETUP

#### 3.1. Charging the Devices

The collar unit and remote control both feature built-in rechargeable batteries. Use the provided dual charging cord and AC adapter to charge both devices simultaneously. A fast charger is included to minimize charging time.

#### 3.2. Attaching Probes and Covers

Select the appropriate metal probes (long for long-haired dogs, short for short-haired dogs) and screw them into the collar unit. For added comfort and to prevent skin irritation, place the corresponding rubber probe covers over the metal probes.

#### 3.3. Adjusting the Collar Strap

The reflective vinyl strap is adjustable to ensure a snug yet comfortable fit for your dog. Ensure the probes make proper contact with your dog's skin without being too tight. The collar dimensions are approximately 2" width, 1" depth, and 1.5" height for the main unit.

### 3.4. Powering On/Off and Pairing

Press and hold the power button on both the remote and the collar unit to turn them on. The devices are factory-paired. Refer to the video below for visual guidance on powering on and mode switching.

## 4. OPERATING MODES

The eXuby Tiny Dog Training Collar offers three distinct training modes: sound, vibration, and static shock. Each mode has adjustable intensity levels to suit your dog's temperament and training needs.

### 4.1. Sound Mode

The sound mode provides an audible cue to your dog. This can be used as a warning or to gain your dog's attention. The remote allows for adjustment of sound intensity.

### 4.2. Vibration Mode

The vibration mode delivers a gentle tactile sensation. This is often effective for dogs that respond well to subtle cues. There are 9 intensity levels for vibration.

### 4.3. Static Shock Mode

The static shock mode provides a mild static correction. This mode should be used cautiously and at the lowest effective setting. There are 9 intensity levels for static shock. Always start with the lowest level and increase only if necessary.

### 4.4. Testing the Shock Function

To ensure the static shock function is working correctly, use the provided shock tester. Place the tester over the probes and activate the shock mode on the remote. The tester will illuminate if the shock is functioning.

## 5. MAINTENANCE

---

### 5.1. Cleaning

Hand wash the collar strap with water as needed and allow it to air dry. Regularly inspect the probes and the collar unit for any dirt or debris and clean gently with a soft, damp cloth.

### 5.2. Battery Care

The collar and remote feature long-lasting rechargeable Lithium Ion batteries. To prolong battery life, avoid fully discharging the devices frequently. Recharge as needed using the provided dual charging cord.

## 6. TROUBLESHOOTING

---

- **Collar not responding:** Ensure both the remote and collar unit are powered on and fully charged. Check if they are properly paired.
- **No correction felt:** Verify the probes are making good contact with your dog's skin. Adjust the strap or use longer probes if your dog has thick fur. Use the shock tester to confirm the function is active.
- **Accidental activation:** The remote features a lock button on the back to prevent unintended commands. Utilize this feature when not actively training.
- **Dog not responding to correction:** Adjust the intensity level of the chosen mode. Ensure the correction is noticeable but not overly harsh. Consistency in training is key.

## 7. SPECIFICATIONS

---

Feature	Detail
Model Number	EXBTZ812
Brand	eXuby

Product Dimensions	5.08 x 2.54 x 3.81 cm (Collar Unit); 5.1L x 2.5W Centimetres (Collar Strap)
