Travel Blue 029

Travel Blue TSA Approved 3-Digit Combination Lock

Model: 029

Introduction

This manual provides instructions for the Travel Blue TSA Approved 3-Digit Combination Lock, Model 029. This lock is designed to secure your luggage and travel bags, offering peace of mind during your journeys. Its TSA-approved design allows airport security personnel to inspect your baggage without damaging the lock or your belongings.

Setup: Setting Your Combination

Your lock is preset to open at **0-0-0**. To set your personal combination, follow these steps:

1. Ensure the lock is open and the dials are set to the factory default combination of **0-0-0**. Align these numbers precisely with the indication line on the front of the lock.

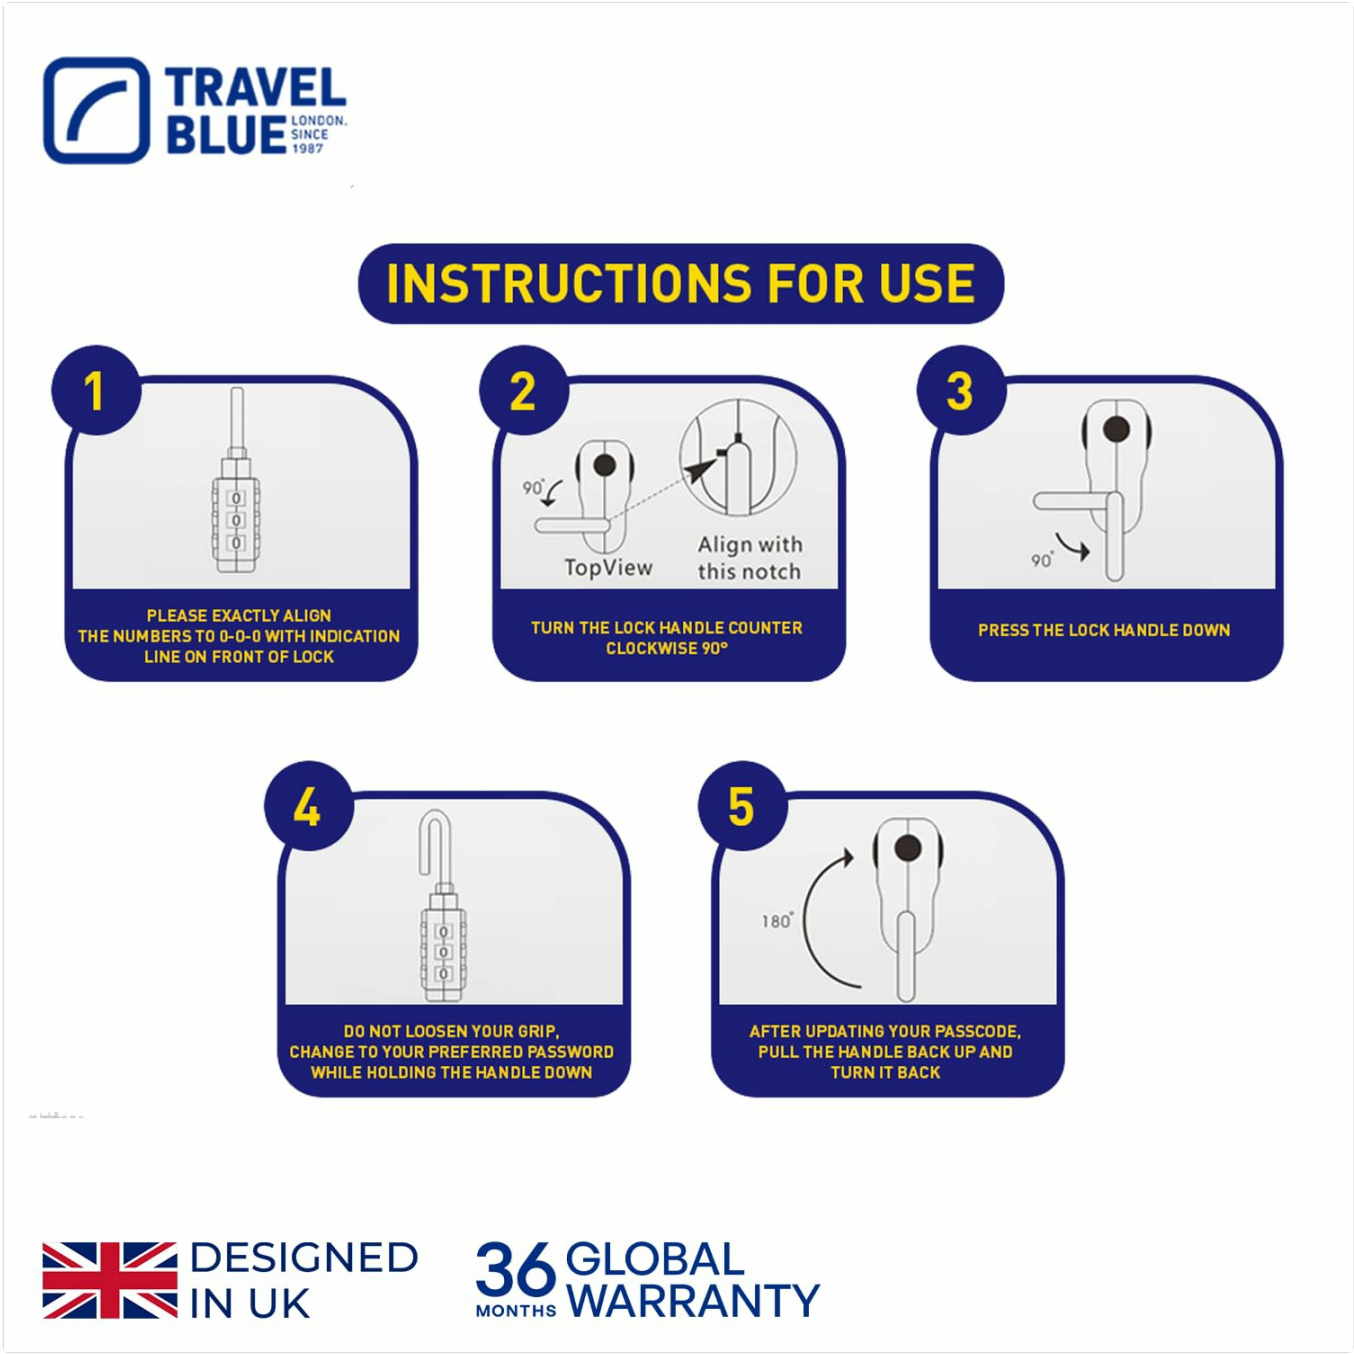

Image: Step 1 of setting the combination, showing the lock dials set to 0-0-0.

2. With the lock open, turn the shackle (the U-shaped metal part)**90 degrees clockwise** from its locked position. There is a small notch on the lock body; align the shackle with this notch.
3. Press the shackle down firmly into the lock body, ensuring it is fully depressed.
4. While holding the shackle down, rotate the dials to set your desired 3-digit combination. Choose a memorable number that is not easily guessed.
5. Release the shackle. Then, turn the shackle back**180 degrees** to its original position. Your new combination is now set.

Important: Remember your new combination. There is no master key or reset button if you forget it, other than trying all 1000 combinations.

Operating Instructions

Locking Your Luggage:

1. Close the zippers or securing points of your luggage.
2. Insert the shackle through the zipper pulls or designated lock points on your bag.
3. Press the shackle down until it clicks into place.
4. Scramble the dials to a random set of numbers to secure the lock.

Unlocking Your Luggage:

1. Dial your personal 3-digit combination, aligning the numbers with the indication line.
2. Pull the shackle upwards to release the lock.

TSA Functionality:

This lock is TSA (Transportation Security Administration) accepted. This means that authorized security personnel at airports can open your lock using a special key without damaging it. After inspection, they will relock your luggage, ensuring its security continues throughout your journey.

Maintenance

- Keep the lock clean and free from dirt or debris, especially around the dials and shackle mechanism.
- Avoid exposing the lock to extreme temperatures or harsh chemicals, which could affect its functionality or finish.
- If the dials become stiff, a small amount of graphite lubricant can be applied, but avoid oil-based lubricants.

Troubleshooting

Lock will not open with the correct combination:

- Ensure each number is precisely aligned with the indication line. Sometimes a slight misalignment can prevent opening.
- Verify that you are using the correct combination. If you recently changed it, try both the old and new combinations.

Cannot set a new combination:

- Make sure the lock is set to its current opening combination (factory default 0-0-0 or your last set combination).
- Ensure the shackle is turned 90 degrees and pressed down completely while setting the new code.
