SETUP

1. Initial Inspection

Upon unboxing, carefully inspect your bass guitar for any signs of damage. Ensure all components are present as listed in the "What's Included" section.

2. Tuning the Bass Guitar

Use a digital tuner to accurately tune your bass. The standard tuning for a 4-string bass is E-A-D-G (from

thickest to thinnest string). Turn the tuning pegs slowly to adjust the string tension until the tuner indicates the correct pitch.

The open-gear tuning machines on the headstock, used for adjusting string tension and pitch.

3. Connecting to an Amplifier

Connect one end of the provided amp cord to the output jack on your bass guitar and the other end to the input of your bass amplifier. Ensure your amplifier is turned off before connecting or disconnecting the cable to prevent damage.

TRUING YOUR OWN TONE

OPERATING

1. Understanding Controls

The GLARRY GJazz Bass features a single-single-coil pickup configuration with individual volume controls for the neck and bridge pickups, and a master tone control:

- **Volume Control (Neck Pickup):** Adjusts the output level of the neck pickup.
- **Volume Control (Bridge Pickup):** Adjusts the output level of the bridge pickup.
- **Tone Control:** Shapes the overall tonal characteristics, from bright to warm.

PRODUCT SIZE

The two single-coil pickups and fixed bridge of the bass guitar, which contribute to its sound.

2. Playing Techniques

Experiment with different pickup combinations and tone settings to find your desired sound. The bass is suitable for various playing styles, including fingerstyle, picking, and slapping. Practice regularly to develop your technique and musicality.

MAINTENANCE

1. Cleaning

Regularly wipe down your bass guitar with a soft, dry cloth after each use to remove sweat and grime. For a deeper clean, use a guitar-specific cleaning solution on the body and a fretboard conditioner on the rosewood fretboard.

2. String Replacement

Strings should be replaced periodically, depending on usage, to maintain optimal tone and playability. Replace one string at a time to keep tension on the neck consistent. Refer to online tutorials or a professional for detailed string replacement instructions.

3. Storage

Store your bass guitar in its portable bag when not in use to protect it from dust, humidity changes, and physical damage. Avoid extreme temperatures and direct sunlight.

TROUBLESHOOTING

- **No Sound:** Check all cable connections (guitar to amp, amp to power). Ensure the amplifier is on and the volume knobs on both the bass and amp are turned up. Test with a different cable or amplifier if possible.
- **Buzzing Strings:** This can be caused by low string action, uneven frets, or improper neck relief. A professional setup may be required. Ensure strings are properly seated in the bridge and nut.
- **Poor Tuning Stability:** Ensure strings are properly wound around the tuning pegs. New strings may take some time to stretch and settle. Check for any loose hardware on the headstock or bridge.
- **Distorted Sound:** Check the amplifier's gain and volume settings. Ensure the bass's tone controls are not set too high, causing unwanted distortion.
