## SETUP

---

The Amazon Basics Air Circulator Fan requires no assembly. Simply remove it from its packaging and place it on a stable, flat surface in your desired location. Ensure the fan is positioned away from curtains or other objects that could obstruct airflow or interfere with the blades.

**Power Connection:** Plug the fan's power cord into a standard 120V electrical outlet. Ensure the outlet is easily accessible for disconnecting power when needed.

## OPERATING INSTRUCTIONS

---

## Speed Settings

The fan features a control knob located on the back of the unit to adjust the airflow speed. The settings are as follows:

- **0:** Off
- **1:** Low Speed
- **2:** Medium Speed
- **3:** High Speed

To change the speed, rotate the knob clockwise to increase the speed or counter-clockwise to decrease it. Always ensure the fan is on a stable surface before adjusting settings.

## Adjusting Tilt

The fan head can be manually tilted up to 90 degrees to direct airflow precisely where needed. Gently hold the fan body and adjust the fan head to the desired angle. The sturdy base will maintain the chosen tilt position.

## MAINTENANCE

---

Regular cleaning helps maintain the fan's performance and extends its lifespan.

- **Before Cleaning:** Always unplug the fan from the electrical outlet before cleaning or performing any maintenance.
- **Exterior Cleaning:** Use a soft, damp cloth to wipe down the exterior surfaces of the fan. Do not use abrasive cleaners or solvents, as they may damage the plastic finish.
- **Grille and Blades:** Periodically clean dust and debris from the front and rear grilles, and the fan blades. A vacuum cleaner with a brush attachment or compressed air can be used for this purpose. For thorough cleaning, some users may carefully disassemble the front grille (refer to user reviews or online guides for specific model instructions, as this is not officially detailed in product information). Ensure all parts are completely dry before reassembling and plugging in the fan.

## TROUBLESHOOTING

---

| Problem                    | Possible Cause   | Solution  |
|----------------------------|--|---|
| Fan does not turn on.      | Not plugged in; power outage; tripped circuit breaker; blown fuse in plug. | Ensure fan is securely plugged into a working outlet. Check household circuit breaker. Some plugs contain a replaceable fuse; check if it needs replacement (refer to plug for fuse specifications, e.g., 5 Amp 125 Volts). |
| Reduced airflow.           | Dust buildup on blades or grilles; obstructed intake/exhaust.              | Unplug the fan and clean the grilles and blades. Ensure there are no obstructions around the fan.   |
| Unusual noise or rattling. | Loose parts; debris inside the fan; fan not on a stable surface.           | Unplug the fan and check for any loose components or foreign objects. Ensure the fan is placed on a firm, level surface.  |
