## OPERATING INSTRUCTIONS

The Rollibot M6 offers both dry and wet cleaning modes.

### Dry Mopping

For dry mopping, attach the appropriate dry mop pads. This mode is ideal for picking up dust, pet hair, and light debris.

1. Ensure the water tank is empty.
2. Press the power button once for slow speed or twice for high speed.
3. Guide the mop across the floor to collect debris. The dual rotating heads will sweep debris into the rear debris bin.

### Wet Mopping, Polishing, and Waxing

For wet cleaning, polishing, or waxing, use the wet mop pads and fill the water tank.

1. Attach the wet mop pads to the mop head.
2. Open the water tank cap and fill the tank with water or a water-based cleaning solution (do NOT use essential oils or oil-based solutions as they may clog the sprayer). The tank holds up to 300mL.
3. Press the power button to select your desired speed.
4. Press the spray button on the handle to dispense liquid onto the floor as you clean.
5. Guide the mop across the floor. For stubborn spots, hold the mop over the area for a longer period.

## TROUBLESHOOTING

---

If you encounter issues with your Rollibot M6, refer to the following common solutions:

- **Mop not turning on:** Ensure the battery is fully charged and correctly inserted. Check the charging adapter for proper connection.
- **Sprayer not working:** Verify the water tank is filled with a water-based solution. The pump might need priming; lift the handle, tilt the mop head downward, and press the spray button a few times. Avoid oil-based solutions that can cause clogs.
- **Mop pads not spinning or making unusual noise:** Check if the mop pads are correctly attached and free from obstructions. Remove and reattach them. If the issue persists, inspect the rotating mechanism for any foreign objects.
- **Short battery run time:** Ensure the battery is fully charged before each use. Battery performance can decrease over time; consider purchasing a replacement battery if needed.
- **Ineffective cleaning:** Ensure mop pads are clean and suitable for the task (wet for scrubbing, dry for dusting). For deep cleaning, pre-clean the floor and then use the Rollibot M6 for maintenance.
