INTRODUCTION

This instruction manual provides essential information for the proper use and care of your Cutex large capacity metal bobbins and the included storage case. These bobbins are specifically designed for compatibility with Juki DU-141, DU-1181, and DU-1181N industrial walking foot sewing machines. Adhering to these guidelines will ensure optimal performance and longevity of your bobbins.

Image: A clear plastic storage case containing 25 metal bobbins. The case has a blue foam insert to hold the bobbins securely. The Cutex brand label is visible on the lid.

SETUP

1. Unpacking the Bobbins

Carefully remove the bobbin storage case from its packaging. Open the hinged lid to access the 25 metal bobbins. Inspect each bobbin for any manufacturing defects or damage. Do not use damaged bobbins as they may affect sewing machine performance.

2. Preparing Bobbins for Use

Before inserting a bobbin into your sewing machine, it must be wound with thread. Refer to your Juki DU-141, DU-1181, or DU-1181N sewing machine's instruction manual for specific bobbin winding procedures. Ensure the thread is wound evenly and securely onto the bobbin to prevent tangling and ensure consistent stitch quality.

Image: A close-up view of several metal bobbins, highlighting their construction and perforations. These bobbins are designed for industrial sewing machines.

OPERATING INSTRUCTIONS

1. Inserting the Bobbin

Once wound, insert the metal bobbin into the bobbin case of your Juki industrial sewing machine. Follow the specific instructions provided in your sewing machine's manual for correct bobbin orientation and tensioning. Incorrect insertion can lead to skipped stitches or thread breakage.

2. Adjusting Bobbin Tension

Proper bobbin tension is crucial for balanced stitches. If your stitches appear uneven or loose, adjust the bobbin tension according to your sewing machine's guidelines. Test the tension on a scrap piece of fabric before beginning your project.

3. Bobbin Compatibility

These bobbins are designed for Juki DU-141, DU-1181, and DU-1181N models. Using them with incompatible machines may result in poor performance or damage to the machine.

MAINTENANCE

1. Cleaning Bobbins

Periodically inspect bobbins for lint, dust, or thread residue. Clean them with a soft brush or cloth. Ensure no debris is present before winding new thread or inserting them into the machine.

2. Storing Bobbins

Store unused bobbins in the provided clear storage case. The foam insert helps keep bobbins organized and prevents thread from unwinding or tangling. The clear lid allows for easy identification of thread colors.

3. Inspecting for Wear

Metal bobbins are durable, but regular use can cause wear. Check for any burrs, dents, or deformities that could snag thread or interfere with machine operation. Replace worn bobbins to maintain stitch quality and prevent machine damage.

TROUBLESHOOTING

Common Issues and Solutions:

- **Uneven Stitches:** Check bobbin tension. Ensure the bobbin is inserted correctly and wound evenly.
- **Thread Breakage:** Inspect the bobbin for burrs or rough edges. Ensure the thread is not snagging anywhere in the bobbin path. Verify correct bobbin winding.
- **Bobbin Not Fitting:** Confirm that your sewing machine model is Juki DU-141, DU-1181, or DU-1181N. These bobbins are large capacity and may not fit other models.
- **Bobbin Winder Issues:** If the bobbin is too loose on the winder, ensure it is properly seated. Some bobbins may require minor adjustments to fit specific winder spindles.

SPECIFICATIONS

Feature	Detail
Product Name	Cutex Large Capacity Metal Bobbins with Storage Case
Model Number	BB-25-40021610-W
Quantity	25 Bobbins per pack
Material	Metal
Compatibility	Juki DU-141, DU-1181, DU-1181N Industrial Walking Foot Sewing Machines
Storage Case	Clear plastic with foam insert, hinged lid with latch
Package Dimensions	7.5 x 5.3 x 1.2 inches
Item Weight	6.4 ounces (0.18 Kilograms)
UPC	610683799575
