# Timex Men's Expedition Scout Solar-Powered 40mm Watch Instruction Manual

Model: TW4B185009J

## INTRODUCTION

Welcome to the instruction manual for your Timex Men's Expedition Scout Solar-Powered 40mm Watch. This timepiece combines classic design with modern solar technology, offering reliable timekeeping and a robust build suitable for daily wear and outdoor adventures. Designed to be charged by any light source, this watch provides convenience and a long power reserve.

Front view of the Timex Expedition Scout Solar-Powered 40mm Watch, showcasing its black dial with full Arabic numerals and luminous hands.

## SETUP

### Initial Charge

Your Timex Expedition Scout watch is powered by light. For optimal performance, it is recommended to fully charge the watch before its first use. Place the watch face up under a strong light source (natural sunlight is ideal) for several hours. A full charge provides a four-month power reserve, ensuring continuous operation even in prolonged darkness.

### Setting Time and Date

To set the time and date:

1. Pull the crown (located on the right side of the watch case) out to position 2.
2. Rotate the crown clockwise or counter-clockwise to set the desired time. Ensure to account for AM/PM if setting the date.
3. To set the date, pull the crown out to position 1 (halfway). Rotate the crown until the correct date appears in the date window.
4. Once time and date are set, push the crown back into position 0 (normal operating position) to start the watch and seal it against water and dust.

Side view of the watch, showing the crown used for setting time and date.

## OPERATING INSTRUCTIONS

### Reading the Time

The watch features a traditional analog display with hour, minute, and second hands. The black dial includes full Arabic numerals for clear readability. Luminous hands provide visibility in low-light conditions.

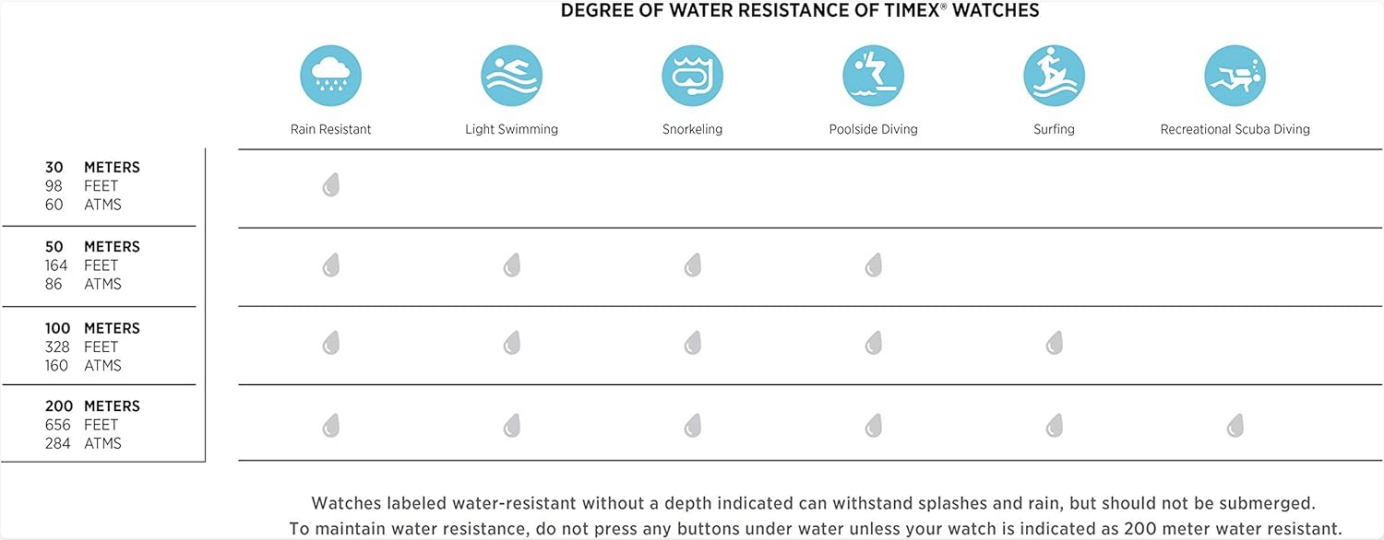

### Date Display

A date window is located at the 3 o'clock position, displaying the current day of the month. The date mechanism is designed for a 31-day month. For months with fewer days (e.g., February, April, June, September, November), the date will need to be manually adjusted at the beginning of the following month.

## MAINTENANCE AND CARE

### Water Resistance

This watch is water resistant to 50 meters (165 feet). This rating means it is generally suitable for short periods of recreational swimming, but it is **not** suitable for diving or snorkeling. Avoid operating the crown or pushers while the watch is wet or submerged to prevent water intrusion.

Timex water resistance chart illustrating suitable activities for various depth ratings.

Cleaning Your Watch

To maintain the appearance of your watch, wipe the case and crystal with a soft, damp cloth. For the leather strap, avoid excessive moisture and harsh chemicals. Allow the strap to air dry if it becomes wet.

Strap Care

The black stitched leather strap is designed for comfort and durability. To prolong its life, avoid prolonged exposure to direct sunlight, extreme temperatures, and harsh chemicals. If the strap becomes stiff or discolored, it may be time for a replacement.

TROUBLESHOOTING

Watch not running or stopping:

This is typically due to insufficient charge. Place the watch under a strong light source for several hours to allow the solar cell to recharge the internal battery. Ensure the watch is not covered or in a dark place for extended periods.

Date not changing correctly:

The date mechanism is set for a 31-day month. At the end of months with fewer than 31 days, you will need to manually adjust the date using the crown (pull to position 1 and rotate) to the correct day.

SPECIFICATIONS

| Feature       | Detail      |
|---------------|-------------|
| Model Number  | TW4B185009J |
| Case Diameter | 40mm        |
| Case Material | Brass       |
