SETUP

Installation

The DOUXURY Wireless RV Backup Camera System is designed for easy installation with no wires required between the monitor and the camera. The camera can be powered by connecting to a 12-36V DC power source, such as a taillight, or directly via the included power adapter. The monitor can be powered via the cigarette lighter charger.

Pairing Additional Cameras

The system supports up to 4 cameras. To pair an additional camera, access the monitor's menu, navigate to the 'Pairing' option, and follow the on-screen instructions. The monitor will display a countdown while searching for new cameras. Once detected, the new camera will automatically pair with the system.

OPERATING INSTRUCTIONS

DVR Recording Function

The RV backup camera system supports a DVR recording function, allowing you to record video footage. The video data is loop recorded and stored on an SD card (maximum 128G support). This feature can be useful for security and incident documentation.

4 Split Screen Monitor

The 7-inch LCD monitor features a 4-channel display, allowing you to view feeds from up to four cameras simultaneously. This is particularly useful for eliminating blind spots around your vehicle. Additional cameras can be purchased separately.

4 SPLITS SCREEN MONITOR SYSTEM

It can match up to 4 cameras easily sweeping blind spots around

You can add up to 3 additional cameras, if you need to add more cameras (1/2/3), please contact us.

KEY FEATURES

1080P HD Video Quality

Equipped with a 1080p CCD image processing chip, the camera delivers high-definition images during the day and bright, clear images at night, ensuring 24-hour clear vision.

MAINTENANCE

To ensure the longevity and optimal performance of your DOUXURY Wireless RV Backup Camera System, regular maintenance is recommended:

- **Cleaning:** Regularly clean the camera lens and monitor screen with a soft, damp cloth. Avoid abrasive cleaners that could scratch surfaces.
- **Cable Inspection:** Periodically check all power cables and connections for any signs of wear, fraying, or damage. Ensure connections are secure.
- **Firmware Updates:** Check the official DOUXURY website periodically for any available firmware updates for your system to ensure you have the latest features and bug fixes.
- **SD Card Management:** If using the DVR recording function, regularly check the SD card for storage capacity and format it periodically to maintain recording efficiency.

TROUBLESHOOTING

If you encounter any issues with your system, please refer to the following common problems and solutions:

- **No Signal on Monitor:**
 - Ensure both the camera and monitor are powered on.
 - Check that the antennas are securely attached to both the camera and monitor.
 - Verify that the camera and monitor are within the effective wireless range (320ft in open area, 180ft in vehicles). Large metal objects or structures can interfere with the signal.
 - Re-pair the camera with the monitor if the connection is lost (refer to 'Pairing Additional Cameras' in the Setup section).
- **Flickering or Intermittent Signal:**

- This may be due to signal interference. Try repositioning the antennas or moving the monitor slightly.
- Ensure no other strong wireless devices are operating too close to the system.
- **Poor Image Quality:**
 - Clean the camera lens to remove any dirt, dust, or water spots.
 - Ensure the monitor screen is clean and free from smudges.
 - Check the monitor's brightness and contrast settings in the menu.
- **DVR Recording Not Working:**
 - Ensure an SD card is properly inserted into the monitor.
 - Check if the SD card has sufficient free space. Format the card if necessary (this will erase all data).
 - Verify the recording function is enabled in the monitor's settings.

If you are unable to resolve an issue using these steps, please contact customer support.

SUPPORT

For any questions, technical assistance, or if you receive the package with some accessories missed or broken, please contact our customer support team:

Email: DouxuryUS@hotmail.com

Please provide your product model number (D-1T1) and a detailed description of your issue when contacting support for faster assistance.
