Problem	Possible Cause	Solution
Shelf feels unstable or wobbly.	Uneven floor; loose connections; anti-tip kit not installed or improperly secured.	◦ Adjust the leveling feet at the bottom of the frame to compensate for unevenness. ◦ Ensure all screws connecting the frame components are fully tightened. ◦ Verify that the anti-tip kit is correctly installed and securely fastened to both the shelf and the wall.
Glass shelf does not sit flush.	Frame not assembled squarely; debris in shelf slot.	◦ Loosen frame screws slightly, adjust the frame to be square, then re-tighten. ◦ Check for any obstructions or debris in the shelf support areas and remove them.
