### Rain-X 820145

# Rain-X 820145 WeatherBeater Wiper Blades User Manual

Model: 820145

## INTRODUCTION

This manual provides comprehensive instructions for the installation, operation, and maintenance of your Rain-X 820145 WeatherBeater Wiper Blades. Designed for durability and performance, these blades ensure clear visibility in various weather conditions. Please read these instructions carefully before installation and use.

## SETUP AND INSTALLATION

Proper installation is crucial for optimal wiper performance. The Rain-X WeatherBeater blades come with a pre-installed multi-adapter designed for easy fitting on most vehicles. Refer to the diagrams below for specific arm types.

### General Installation Steps:

- 1. Remove Old Wiper Blade:** Carefully lift the wiper arm away from the windshield. Locate the release tab or button on the old wiper blade connector. Press or lift the tab and slide the old blade off the wiper arm.
- 2. Clean Windshield:** Before installing new blades, clean your windshield thoroughly to remove any dirt or debris that could damage the new blades.
- 3. Identify Wiper Arm Type:** Your vehicle may have a J-Hook, Pin Arm, Bayonet Arm, or other types. The

Rain-X WeatherBeater blades are designed with a multi-adapter.

#### 4. Install New Wiper Blade:

- **For J-Hook Arms (Small 9x3 and Large 9x4):** The pre-installed connector fits small (9x3) J-hook arms directly. For larger (9x4) J-hook arms, replace the pre-installed connector by snapping the middle arch onto the wiper frame's center post. Slide the wiper arm hook into the adapter until it locks securely with a 'click'.
- **For other arm types (Pin Arm, Bayonet Arm):** If your vehicle uses a different arm type, you may need to adjust the adapter or use an alternative adapter provided in the packaging. Follow the specific instructions and diagrams on the blade packaging for these types.

#### 5. Secure the Blade:

Gently pull on the blade to ensure it is securely locked onto the wiper arm. Carefully lower the wiper arm back onto the windshield.

## OPERATION

Once installed, your Rain-X WeatherBeater Wiper Blades are ready for use. Operate your vehicle's windshield wipers as needed for clear visibility during rain, snow, or when cleaning the windshield.

- Ensure your windshield washer fluid reservoir is adequately filled for optimal cleaning.
- Avoid operating dry wipers on a dry windshield, as this can cause premature wear and streaking.
- Adjust wiper speed according to precipitation intensity for best results.

## MAINTENANCE

Regular maintenance extends the life and performance of your wiper blades.

- **Clean Blades Regularly:** Wipe the rubber squeegee with a damp cloth or paper towel to remove dirt, grime, and road film. This helps prevent streaking.
- **Inspect for Damage:** Periodically check the rubber squeegee for cracks, tears, or hardening. Also, inspect the blade frame for any signs of bending or corrosion.
- **Avoid Harsh Chemicals:** Do not use petroleum-based cleaners or solvents on the rubber blades, as these can degrade the material.
- **Clear Ice and Snow:** Before operating wipers in freezing conditions, ensure any ice or heavy snow is removed from the windshield and blades to prevent damage.

It is recommended to replace wiper blades every 6 to 12 months, or sooner if performance deteriorates, to maintain optimal visibility and safety.

## TROUBLESHOOTING

If you experience issues with your wiper blades, consider the following common problems and solutions:

Problem	Possible Cause	Solution
<b>Streaking</b>	Dirty windshield or blades, worn rubber, incorrect blade angle.	Clean blades and windshield. Inspect blades for wear; replace if necessary. Ensure proper installation.
<b>Chattering/Skipping</b>	Dirty windshield, bent wiper arm, hardened rubber, incorrect blade angle.	Clean blades and windshield. Check wiper arm for bends. Replace blades if rubber is hardened. Ensure proper installation.
<b>Noise (Squeaking/Screeching)</b>	Dry windshield, dirty blades, worn rubber, improper tension.	Use windshield washer fluid. Clean blades. Replace blades if worn. Consult a professional if arm tension is suspected.
<b>Unswept Areas</b>	Bent wiper arm, improper blade length, damaged blade frame.	Check wiper arm for bends. Ensure correct blade length for your vehicle. Replace damaged blades.

## SPECIFICATIONS

- **Brand:** Rain-X
- **Model:** 820145 WeatherBeater
- **Blade Sizes:** 26 inches and 18 inches (as packaged)
- **Mounting Type:** Multi-adapter (Pinch Tab compatible, designed for various arm types including J-Hook)
- **Squeegee Material:** All Natural Rubber
- **Frame Material:** Galvanized Steel
- **UPC:** 079118201456

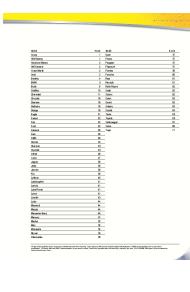

## WARRANTY AND SUPPORT

Rain-X WeatherBeater Wiper Blades are manufactured to high-quality standards. For specific warranty information, please refer to the product packaging or visit the official Rain-X website. Keep your proof of purchase for any warranty claims.

For further assistance or technical support, please contact Rain-X customer service through their official website or the contact information provided on the product packaging.
