2. SAFETY INFORMATION

WARNING: Failure to follow these safety instructions could result in serious injury or death.

- **Carbon Monoxide Hazard:** Generators produce carbon monoxide, a colorless, odorless, poisonous gas. Operate the generator outdoors in a well-ventilated area, far away from windows, doors, and vents. Never operate indoors or in enclosed spaces.
- **Fire Hazard:** Gasoline is highly flammable. Refuel in a well-ventilated area with the engine off and cool. Do not smoke or allow open flames near the generator. Store fuel in an approved container.
- **Electrical Shock Hazard:** Do not operate the generator in wet conditions. Ensure all electrical connections are secure and dry. Use only grounded extension cords.
- **Hot Surfaces:** The generator's engine and muffler become very hot during operation and remain hot for a period after shutdown. Avoid contact with hot surfaces.
- **Children and Pets:** Keep children and pets away from the generator, especially during operation.

3. SETUP

Before first use, ensure the generator is placed on a firm, level surface. Follow these steps for initial setup:

1. **Unpacking:** Carefully remove the generator and all accessories from the packaging. Check for any shipping damage.
2. **Add Engine Oil:** Locate the oil fill cap. Add the recommended type and amount of engine oil (refer to specifications for oil type and capacity). Do not overfill.
3. **Add Fuel:** Fill the fuel tank with fresh, unleaded gasoline. Do not overfill. Ensure the fuel cap is securely tightened.
4. **Connect Battery (if applicable):** If your model includes a battery for electric start, connect it according to the instructions provided in the battery compartment.

4. OPERATING INSTRUCTIONS

4.1 Starting the Generator

1. Ensure the generator is on a level surface and all electrical loads are disconnected.
2. Turn the fuel valve to the 'ON' position.
3. Move the choke lever to the 'CHOKE' position (for cold starts).
4. Turn the engine switch to the 'ON' position.
5. Pull the recoil starter handle firmly and smoothly until the engine starts.
6. Once the engine starts, gradually move the choke lever to the 'RUN' position.

4.2 Connecting Electrical Loads

Once the generator is running stably, you can connect your electrical devices. The PMI2000 features AC outlets and a USB port.

- Plug your devices into the appropriate AC outlets (230V) or the USB port (5V).
- Do not exceed the generator's rated output of 1600 Watts. Overloading will trip the circuit breaker.
- For sensitive electronics, ensure the 'ECO' mode is engaged if available, as it provides cleaner power.

4.3 Stopping the Generator

1. Disconnect all electrical loads from the generator.
2. Turn the engine switch to the 'OFF' position.
3. Turn the fuel valve to the 'OFF' position.

5. MAINTENANCE

Regular maintenance is crucial for the longevity and optimal performance of your generator.

- **Engine Oil:** Check oil level before each use. Change oil after the first 20 hours of operation, then every 50 hours or annually.
- **Air Filter:** Inspect the air filter every 50 hours or more frequently in dusty conditions. Clean or replace if dirty.
- **Spark Plug:** Inspect the spark plug every 100 hours. Clean or replace if necessary. Ensure correct gap.
- **Fuel Filter:** Inspect and clean the fuel filter periodically.
- **Storage:** For long-term storage, drain the fuel tank and carburetor, or use a fuel stabilizer. Store in a dry, well-ventilated area.

6. TROUBLESHOOTING

This section provides solutions to common operational issues.

Problem	Possible Cause	Solution
Engine does not start	No fuel / Low oil level / Choke incorrect / Spark plug issue	Add fuel / Add oil / Adjust choke / Clean or replace spark plug
No power output	Circuit breaker tripped / Overload / Faulty connection	Reset breaker / Reduce load / Check connections
Engine runs rough	Stale fuel / Dirty air filter / Spark plug issue	Drain and refill with fresh fuel / Clean or replace air filter / Inspect spark plug
