2. IMPORTANT SAFETY INFORMATION

Please read all instructions carefully before using your adjustable base. Failure to follow these guidelines may result

in injury or damage to the product.

- **Weight Capacity:** Do not exceed the maximum weight recommendation of **850 pounds** (including mattress and occupants). Exceeding this limit may cause damage to the base and void the warranty.

- **Children and Pets:** Do not allow children or pets to play on or under the adjustable base.
- **Power Cord:** Ensure the power cord is not pinched or tangled. Do not operate the base if the power cord is damaged.
- **Emergency Power-Down:** In case of a power outage, the base includes an emergency power-down feature to return the bed to a flat position. Refer to the troubleshooting section for details.

6. TROUBLESHOOTING GUIDE

If you experience issues with your adjustable base, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Base does not operate.	No power, loose connection, remote not paired.	Check if the power cord is securely plugged into the wall outlet and the power supply. Verify the outlet is functional by plugging in another device. Ensure the remote control batteries are not depleted. If the remote is not paired, follow the pairing instructions below.
Remote control not responding.	Batteries low/dead, remote not paired, remote locked.	Replace the remote control batteries. Ensure the remote is not in "LOCK" mode (press and hold the LOCK button to unlock). Re-pair the remote control: Unplug the base for 30 seconds, then plug it back in. Within 10 seconds, press and hold the "PAIR" button (usually located on the control box under the base) until the base responds.
Motor makes noise but base does not move.	Weight exceeds capacity, obstruction.	Reduce the weight on the bed. The maximum weight capacity is 850 lbs. Check for any obstructions under the bed that might be preventing movement.
Base is stuck in an articulated position during power outage.	Loss of power.	Utilize the emergency power-down feature. This typically involves connecting a 9V battery (not included) to a specific port on the control box to lower the bed. Refer to the control box diagram for exact location.
