3. **Attach the Canopy Arm:** Connect the canopy arm to the main pole. Ensure all connections are tight and secure.

TROUBLESHOOTING

Here are solutions to common issues you might encounter:

Problem	Possible Cause	Solution
Umbrella is unstable or tips over easily.	Insufficient base weight.	Ensure the cross base is properly weighted with sand or water-filled base weights (not included). This is critical for stability.
Crank mechanism is stiff or difficult to operate.	Dirt or debris in the mechanism; lack of lubrication.	Clean the crank mechanism and apply a silicone-based lubricant if necessary.
Canopy does not open or close smoothly.	Obstruction or misaligned ribs.	Check for any obstructions or bent ribs. Gently guide the canopy during operation.
Umbrella sways excessively in light wind.	Base not heavy enough or umbrella not fully secured.	Add more weight to the base. Ensure all locking mechanisms (e.g., rotation pedal) are engaged. Close the umbrella in windy conditions.
