# Cisco Catalyst 1000-48P-4X-L Network Switch User Manual

## 1. INTRODUCTION

This manual provides essential instructions for the installation, operation, maintenance, and troubleshooting of the Cisco Catalyst 1000-48P-4X-L Network Switch. Please read this document thoroughly before using the device to ensure proper functionality and safety.

The Cisco Catalyst 1000-48P-4X-L is an enterprise-class, fixed managed Gigabit Ethernet Layer 2 switch designed for small businesses and branch offices. It supports critical IoT deployments and operates on Cisco IOS Software, offering both a Command-Line Interface (CLI) and an intuitive web user interface for management.

## 2. PRODUCT OVERVIEW

### 2.1 Hardware Configuration

- **48 Gigabit Ethernet Ports:** Provides 48 10/100/1000 Mbps ports for network connectivity.
- **PoE+ Support:** Offers a 370W Power over Ethernet Plus (PoE+) budget, supporting uninterrupted power to PoE devices even during switch reboots (Perpetual PoE+).
- **4 SFP+ Uplink Ports:** Includes 4 10 Gigabit SFP+ uplink ports for high-speed connections to other network devices.

Figure 1: Front view of the Cisco Catalyst 1000-48P-4X-L Network Switch, featuring 48 Gigabit Ethernet ports and 4 SFP+ uplink ports on the right side. The Cisco logo is visible on the left.

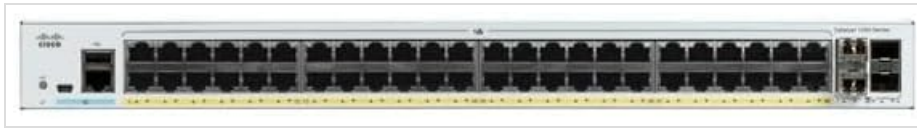

Figure 2: A top-down perspective of the Cisco Catalyst 1000-48P-4X-L Network Switch, showing the arrangement of the 48 Gigabit Ethernet ports and 4 SFP+ uplink ports along the front edge.

## 2.2 Key Features

- **Flexible Management:** Manage the switch via the Cisco IOS CLI (command-line interface) or an intuitive web user interface.
- **Centralized Monitoring:** Centrally monitor and configure up to 8 switches via a single IP address or with any third-party network management tool.
- **Enterprise-Class Security:** Natively supports IPv4/IPv6 FHS security features such as port security, DHCP snooping, and dynamic ARP inspection. These can be easily configured using a single "Auto-Secure" command.
- **802.1x Support:** Provides 802.1x support for all connected devices, enhancing network access control.

## 3. SETUP

---

### 3.1 Unpacking and Inspection

Carefully unpack the switch and verify that all components are present and undamaged. The box should contain:

- Cisco Catalyst 1000-48P-4X-L Switch
- Accessory Kit
- 1 printed document (this manual or a quick start guide)

If any items are missing or damaged, contact your vendor or Cisco support immediately.

### 3.2 Physical Installation

1. **Rack Mounting:** The switch is designed for standard 19-inch rack mounting. Secure the switch using the provided rack-mount brackets and screws. Ensure adequate ventilation around the switch.
2. **Power Connection:** Connect the power cord to the switch's power input and then to a grounded AC power outlet.
3. **Network Cable Connection:** Connect Ethernet cables from your network devices (computers, servers, access points) to the Gigabit Ethernet ports on the switch. For high-speed uplinks, insert SFP+ transceivers into the SFP+ ports and connect fiber optic cables.

### 3.3 Initial Power On

After connecting the power cord, the switch will automatically power on. Observe the system LED indicators on the front panel. The System LED should turn green, indicating successful power-up and self-test completion.

## 4. OPERATING INSTRUCTIONS

---

### 4.1 Management Interfaces

The Cisco Catalyst 1000-48P-4X-L switch can be managed using two primary interfaces:

- **Command-Line Interface (CLI):** Access the CLI via a console cable (RJ-45 to DB-9) connected to the console port, or remotely via Telnet/SSH after initial configuration. The CLI provides full control over all switch features.
- **Web User Interface (Web UI):** An intuitive graphical interface accessible via a web browser. After assigning an IP address to the switch, open a web browser and enter the switch's IP address to access the Web UI.

## 4.2 Basic Configuration

Initial configuration typically involves:

- Assigning an IP address and subnet mask to the management VLAN interface.
- Setting up a default gateway.
- Configuring user accounts and passwords for secure access.
- Creating and assigning VLANs (Virtual Local Area Networks) to segment network traffic.

## 4.3 Security Features

The switch offers robust security features to protect your network:

- **Port Security:** Restricts input to an interface by limiting and identifying MAC addresses of devices allowed to access the port.
- **DHCP Snooping:** Filters untrusted DHCP messages and builds a DHCP snooping binding database.
- **Dynamic ARP Inspection (DAI):** Prevents ARP spoofing attacks by validating ARP packets.
- **802.1x Authentication:** Provides port-based network access control, requiring users and devices to authenticate before gaining network access.
- **"Auto-Secure" Command:** A simplified command to configure multiple IPv4/IPv6 FHS security features simultaneously.

## 5. MAINTENANCE

---

Regular maintenance ensures optimal performance and longevity of your switch:

- **Firmware Updates:** Periodically check the Cisco website for the latest firmware updates. Applying updates can provide new features, performance improvements, and security patches.
- **Environmental Control:** Ensure the operating environment remains within specified temperature and humidity ranges. Keep the switch free from dust and obstructions to airflow.
- **Cable Management:** Maintain organized cabling to prevent accidental disconnections and improve airflow.
- **Configuration Backup:** Regularly back up your switch configuration to an external storage device to facilitate quick recovery in case of a system failure.

## 6. TROUBLESHOOTING

---

This section addresses common issues you might encounter with your Cisco Catalyst 1000-48P-4X-L switch.

### 6.1 Common Issues and Solutions

- **No Power:**
  - Verify the power cord is securely connected to both the switch and the power outlet.
  - Check the power outlet with another device to ensure it is functional.

- Ensure the power supply unit (if external) is working correctly.

- **No Network Connectivity:**

- Check the link/activity LEDs on the switch port and the connected device. A solid green or blinking LED indicates a valid link and activity.
- Verify that the Ethernet cable is properly connected and not damaged.
- Ensure the connected device's network adapter is enabled and configured correctly.
- Check switch port configuration (VLANs, port security) to ensure it matches the connected device's requirements.

- **Slow Network Performance:**

- Check for network loops using spanning tree protocol (STP) status.
- Monitor port utilization and error counters for congestion or faulty cables.
- Ensure duplex settings match between the switch port and the connected device.

For more complex issues or persistent problems, consult the comprehensive Cisco documentation available online or contact Cisco Technical Support.

## 7. SPECIFICATIONS

### 7.1 Technical Specifications

| Feature                    | Specification                                                |
|----------------------------|--------------------------------------------------------------|
| Model Number               | C1000-48P-4X-L                                               |
| Ports                      | 48 x 10/100/1000 Gigabit Ethernet, 4 x 10G SFP+ Uplink       |

## 8. WARRANTY AND SUPPORT

### 8.1 Warranty Information

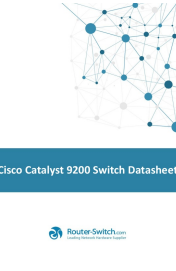

The Cisco Catalyst 1000-48P-4X-L Network Switch comes with an **Enhanced Limited Lifetime Warranty**. Please refer to the official Cisco warranty documentation for full terms and conditions, including coverage

details and duration.

## 8.2 Technical Support

For technical assistance, product documentation, software downloads, and further support resources, please visit the official Cisco Support website. You can also contact Cisco Technical Assistance Center (TAC) for expert help with product issues.

The image shows the front cover of a Cisco document. At the top, there is a thick blue horizontal bar. Below this bar, on the left, is the Cisco logo (the word "cisco" in a sans-serif font) and the text "Your partner in innovation" in a smaller font. On the right side, there is a small blue square icon followed by the text "Ordering Guide" and "Cisco order" in a sans-serif font. The central part of the cover is a large white rectangle containing the title "Ordering Guide for Cisco Catalyst 1000 Series Switches" in a large, bold, blue sans-serif font. Below the title, the date "January 2020" is printed in a smaller, black sans-serif font. At the very bottom of the page, there is a small line of text: "© 2020 Cisco and/or its affiliates. All rights reserved." and on the right side, "Page 1 of 1".

#### Removal of Mini-USB Console Port in Catalyst 1000 and CBS250/CBS350 Switches

##### Objective

The objective of this article is to go over the change to remove the mini-USB console port on Catalyst 1000, Cisco Business 350, and Cisco Business 250 Series Switches.

##### Applicable Devices

- Catalyst 1000
- CBS350
- CBS250

##### Introduction

A console port is used to access the command line interface (CLI) locally through a serial connection. The CLI can be used to configure and troubleshoot especially when the network is not available.

A change has been made to remove the mini-USB console port on Catalyst 1000, Cisco Business 350 and Cisco Business 250 Series Switches. The RJ45 console port is not affected. You can still access the console port on the switch through an RJ45 console cable.

##### Table of Contents

- Removal of Mini-USB Port
- Applicable Products
- Using Console Port on the Original Hardware
- Using Console Port on the Updated Hardware
- Other Ways to Manage the Switch with Network Connectivity
- Support

##### Removal of Mini-USB Port

The following images illustrate the change.

In the original design, the console can be accessed through either RJ45 or mini-USB port. Notice the ports above the blue line, circled in red. The USB port is on the left.
