eero 6 Mesh WiFi Router User Manual

Model: eero 6

Introduction

This manual provides comprehensive instructions for setting up, operating, maintaining, and troubleshooting your eero 6 mesh WiFi router. The eero 6 is designed to deliver fast, reliable Wi-Fi 6 coverage throughout your home, supporting high-speed internet plans and a large number of connected devices.

Image: The eero 6 mesh WiFi router, a compact white device, shown on a clean surface. This device is central to establishing a robust home network.

Setup

Setting up your eero 6 router is a straightforward process, primarily guided by the eero mobile application.

1. **Download the eero App:** On your supported iOS or Android device, download the eero app from your device's app store.
2. **Prepare Your Internet Service:** Ensure your internet service is active and you have any necessary modem or DSL modem connected and powered on.
3. **Connect the eero 6:** Connect one end of the provided Ethernet cable to one of the Ethernet ports on your eero 6 router and the other end to your modem.
4. **Power On:** Plug the power adapter into your eero 6 router and then into a power outlet. Wait for the indicator light to turn solid white.
5. **Follow In-App Instructions:** Open the eero app and follow the on-screen prompts to create your eero account, name your network, and complete the setup. The app will guide you through connecting additional eero devices if you have them.

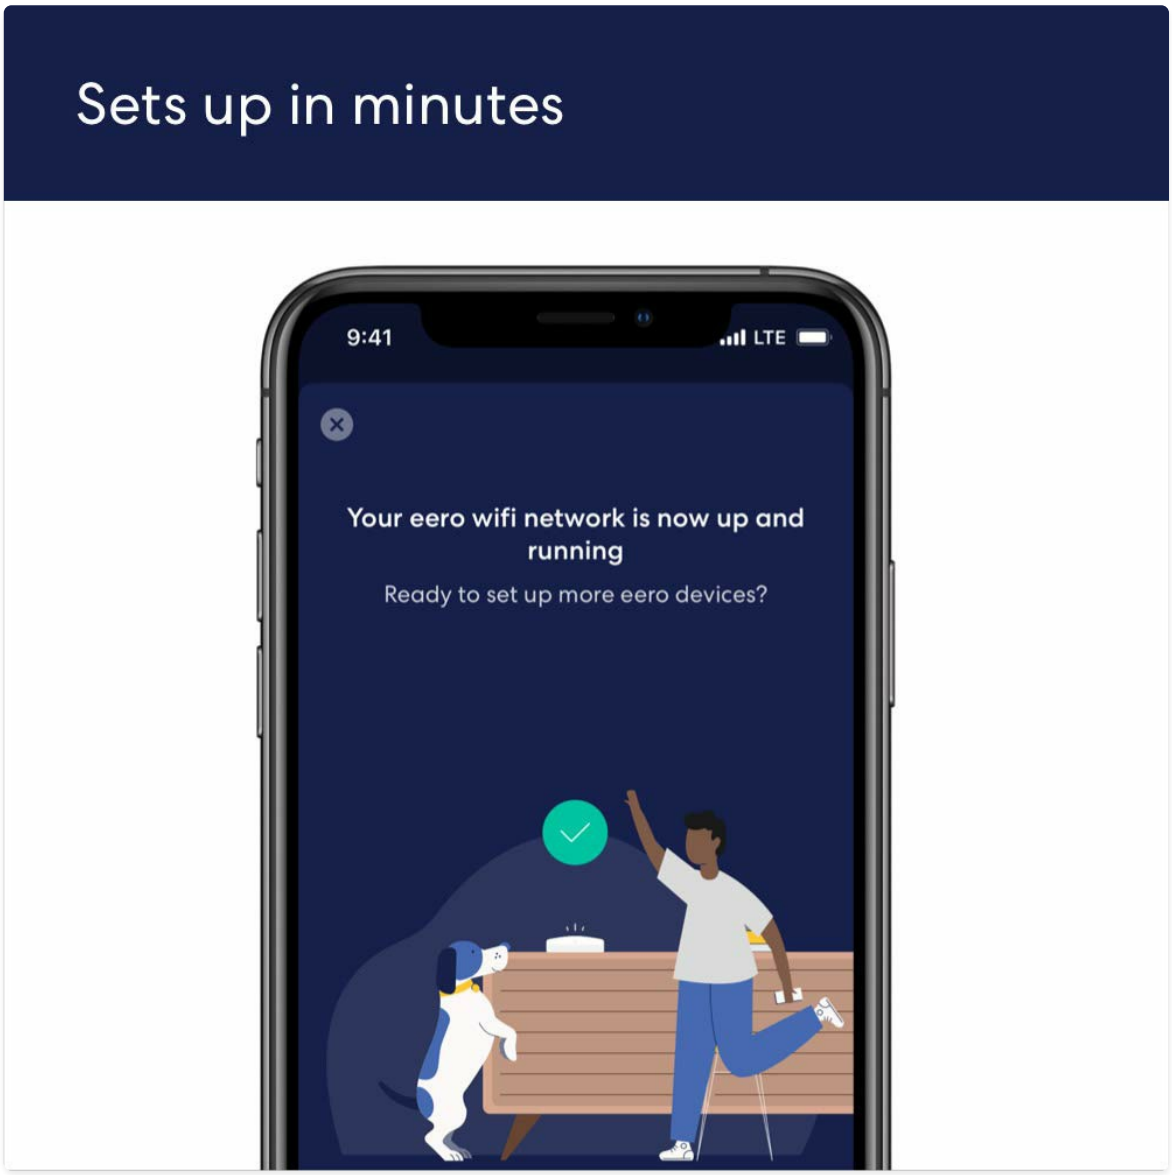

Image: A smartphone displaying the eero app, indicating that the WiFi network is set up and running. This visual confirms the ease of the setup process.

Operating

The eero 6 router is designed for optimal performance and ease of use, providing robust Wi-Fi 6 coverage and smart home integration.

- **Whole-Home Coverage:** The eero 6 covers up to 1,500 sq. ft. with Wi-Fi, supporting internet speeds up to 900 Mbps.
- **TrueMesh Technology:** This technology intelligently routes traffic to minimize drop-offs, ensuring smooth 4K video streaming, gaming, and video conferencing without dead spots or buffering.
- **Device Connectivity:** Wi-Fi 6 supports faster Wi-Fi speeds than previous standards and can connect over 75 devices simultaneously.
- **Built-in Zigbee Smart Home Hub:** The eero 6 integrates with compatible Zigbee devices on your network, allowing control via Alexa without the need for separate smart home hubs.
- **Automatic Updates:** Your eero system automatically receives software updates, enhancing performance, adding new features, and maintaining network security.
- **System Expansion:** You can easily expand your eero system by adding more eero products, thanks to cross-compatible hardware.

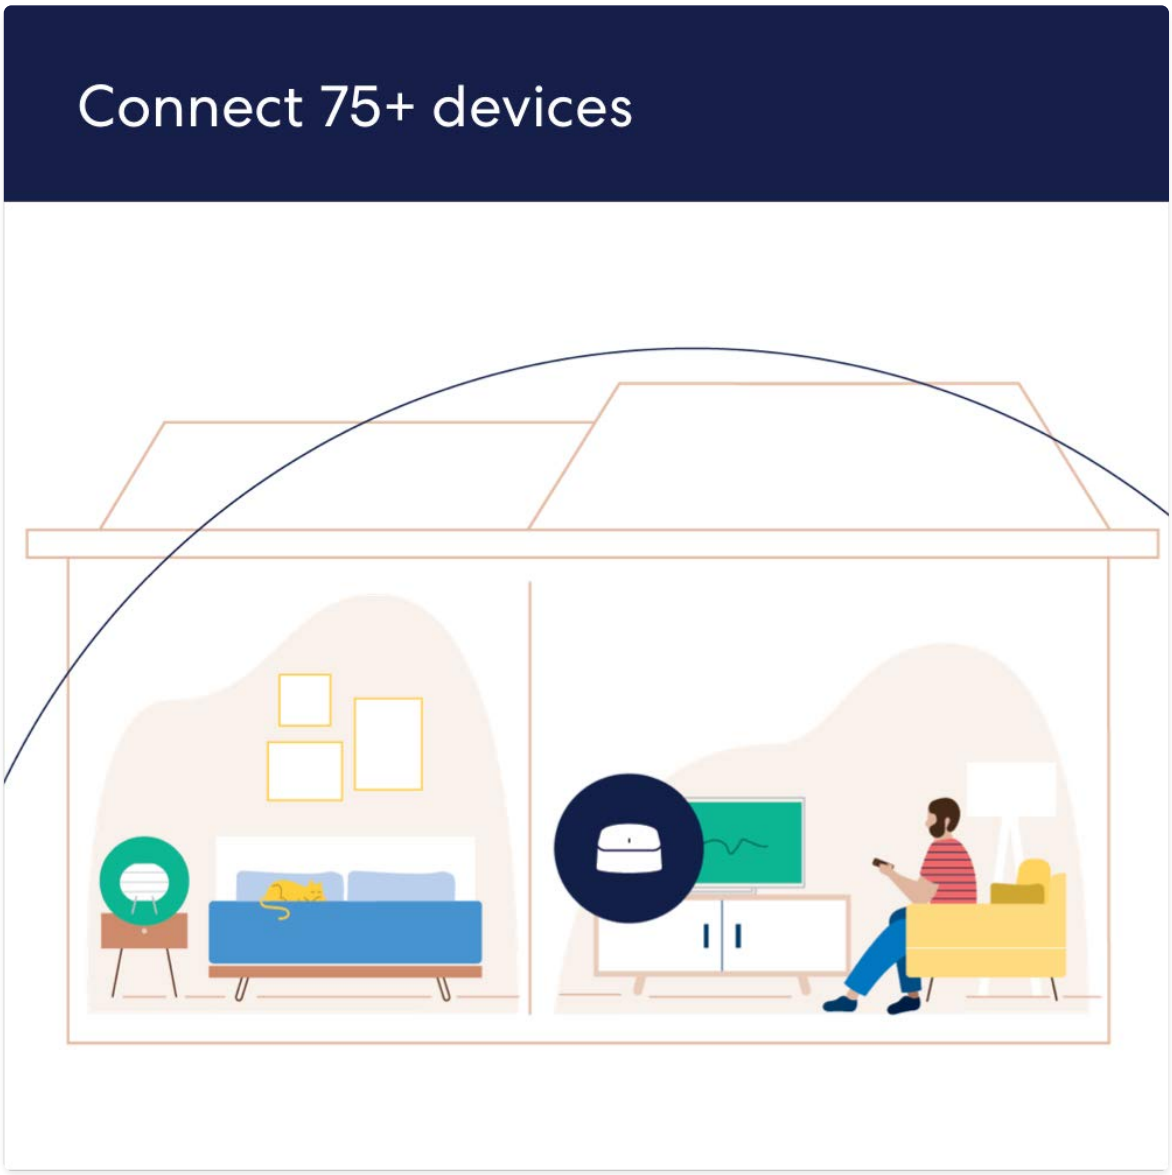

Image: An illustration depicting various devices within a home, such as a laptop, smartphone, and smart TV, all seamlessly connected to the eero network, highlighting its capacity to connect over 75 devices.

Image: A person working on a laptop outdoors, demonstrating the eero's ability to eliminate dead spots and provide consistent Wi-Fi coverage even in extended areas of the home.

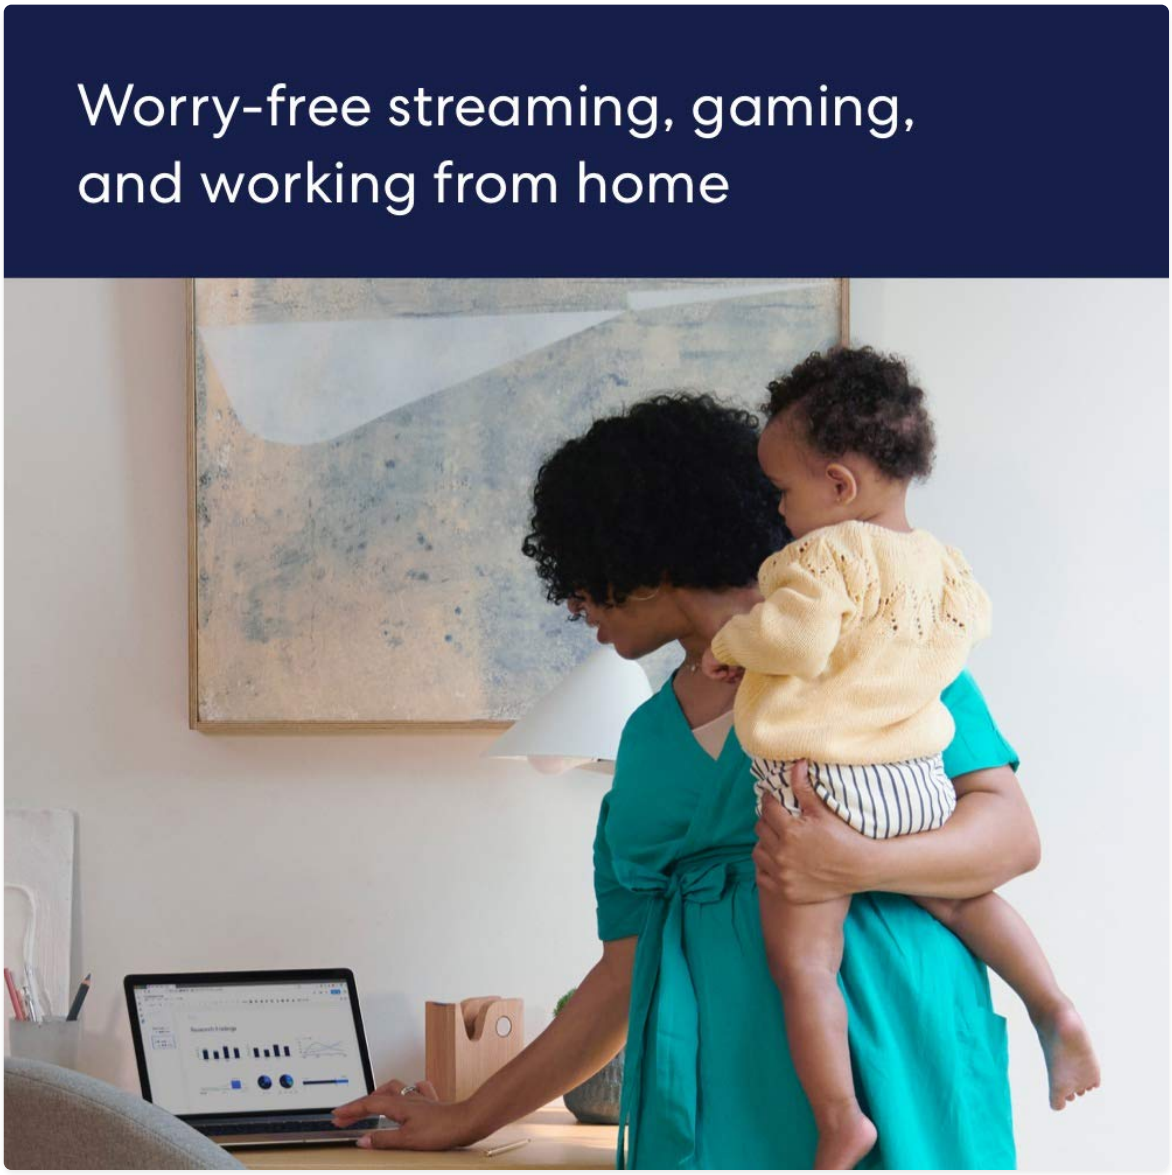

Image: A woman holding a baby while using a laptop, illustrating the reliability of the eero network for streaming, gaming, and working from home without interruptions.

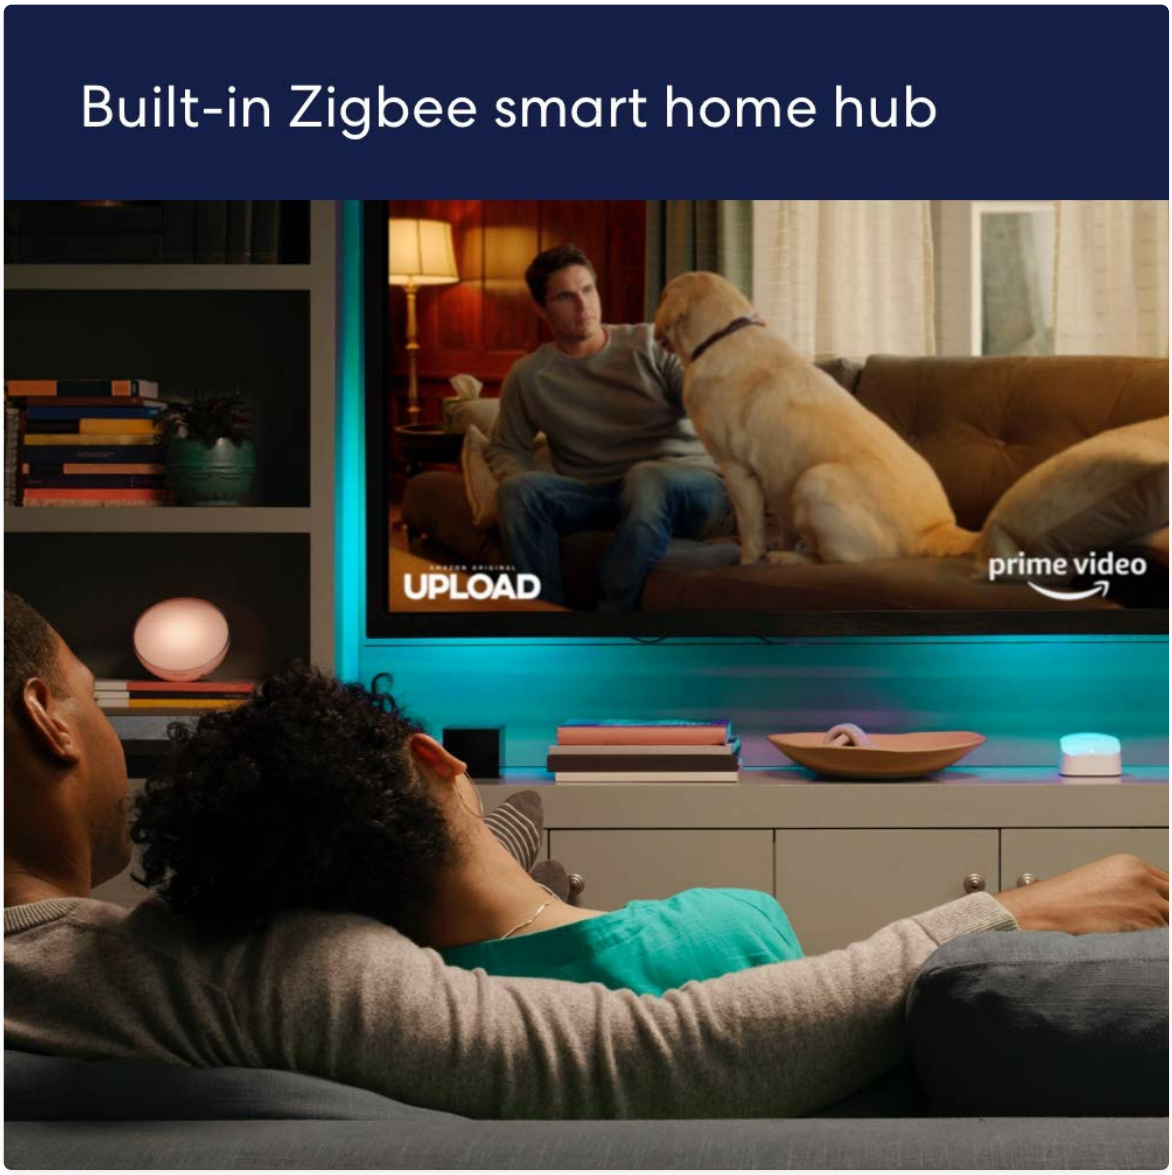

Image: A couple watching television in a living room with various smart home devices visible, demonstrating the eero 6's built-in Zigbee smart home hub functionality.

Maintenance

To ensure the longevity and optimal performance of your eero 6 router, consider the following maintenance guidelines:

- **Automatic Software Updates:** Your eero system automatically downloads and installs updates. Ensure your device remains connected to the internet to receive these critical updates for security and performance enhancements.
- **Placement:** Place your eero device in an open area, away from large metal objects, thick walls, and other electronic devices that may cause interference. Ensure adequate ventilation around the device.
- **Cleaning:** Periodically wipe the exterior of the eero device with a soft, dry cloth. Avoid using liquid cleaners or abrasive materials.
- **Power Cycle:** If you experience minor network issues, a simple power cycle (unplugging the power adapter for 10 seconds and plugging it back in) can often resolve them.

Troubleshooting

If you encounter issues with your eero 6 router, try the following troubleshooting steps:

- **No Internet Connection:**
  - Check if your modem is working correctly and its indicator lights are normal.
  - Ensure the Ethernet cable between your eero and modem is securely connected.
  - Power cycle both your modem and your eero router.
- **Slow Speeds:**
  - Verify your internet plan speed with your Internet Service Provider (ISP).
  - Check for interference from other electronic devices or physical obstructions.
  - Ensure your eero devices are optimally placed for coverage.
- **Device Not Connecting:**
  - Restart the device you are trying to connect.
  - Ensure you are entering the correct Wi-Fi password.
  - Check the eero app for any network alerts or issues.
- **eero App Issues:**
  - Ensure your eero app is updated to the latest version.
  - Restart your mobile device.

Getting started with eero

One of the biggest frustrations with a traditional router has to be the confusing and complex setup process, so at eero we've taken a different approach: make the entire setup experience as quick and easy as possible. So, whether you're an old hand at networking or are taking your first step into home WiFi, eero is for you.

Our app will walk you through the process and do most of the heavy lifting, but here's a quick overview of what to expect. If you're new to WiFi, or just need a refresher, we encourage you to read this article and refer back to it if you have any concerns during in-app setup.

Before you begin:

Setup components

- In the box:
  - Ethernet cable
  - eero(s)
  - Power cord(s)
- What you'll need:
  - eero iOS or Android app
  - At least one 1st or 2nd generation eero (eero Beacons cannot be used to start a network)
  - Mobile device with a data connection (If you don't have access to a data connection, see our workaround instructions here.)
  - Internet service
  - Cable or DSL modem (if required)*

Don't know what a modem is? Unsure if you have one? Find out here.

Here's how to get started getting your eero network online:

STEP 1: Download the eero app for iOS or Android:

Download the free eero app – you can find it on the Apple Store or Google Play. eero supports both iOS and Android (check here for details on the versions we support). You'll need the app to set up your eero network. You won't be able to set up your system on a web browser.

STEP 2: Create an eero account
