## Acxico LB363

# Acxico HEPA Filter Replacement Accessory

USER MANUAL FOR MIDEA SC861 SC861A

Brand: Acxico | Model: LB363

## Introduction

This manual provides essential information for the installation, maintenance, and troubleshooting of your Acxico HEPA Filter Replacement Accessory. Designed specifically for Midea SC861 and SC861A vacuum cleaner models, these filters are crucial for maintaining optimal cleaning performance and ensuring cleaner air in your home.

The high-efficiency HEPA filter captures fine dust particles, pollen, and other allergens, preventing them from recirculating into the air you breathe. Regular replacement and maintenance of your filter will extend the life of your vacuum cleaner and ensure consistent air purification.

## Installation Guide

---

Follow these steps to correctly install your new Acxico HEPA filter into your Midea SC861 or SC861A vacuum cleaner.

1. **Power Off and Unplug:** Before beginning, ensure your vacuum cleaner is turned off and unplugged from the power outlet to prevent accidental operation.
2. **Locate Filter Compartment:** Refer to your vacuum cleaner's original manual to locate the filter compartment. This is typically found near the dustbin or motor housing.
3. **Remove Old Filter:** Carefully remove the old, dirty filter. It may be necessary to twist or unlatch a cover. Dispose of the old filter responsibly.
4. **Insert New Filter:** Take one new Acxico HEPA filter. Align the filter with the compartment opening. The filter is designed for a snug fit to ensure proper sealing and filtration. Gently push or twist the filter into place until it is securely seated.
5. **Secure Compartment:** Close the filter compartment cover, ensuring it latches securely.
6. **Test Operation:** Plug in your vacuum cleaner and perform a brief test to ensure proper function and suction.

## Operating Principles

---

The Acxico HEPA filter functions as a critical component of your vacuum cleaner's filtration system. As air is drawn into the vacuum, it passes through the pleated filter material. The high-efficiency particulate air (HEPA) design ensures that microscopic particles, including dust mites, pet dander, pollen, and mold spores, are trapped within the filter media. This process prevents these contaminants from being exhausted back into your living space, thereby improving indoor air quality. For optimal performance, ensure the filter is clean and properly seated before each use.

## Maintenance

---

Regular maintenance of your HEPA filter is essential for prolonging its lifespan and maintaining your vacuum cleaner's efficiency. The Acxico HEPA filters are designed to be reusable.

### Cleaning Instructions:

1. **Remove Filter:** Turn off and unplug the vacuum. Remove the filter as described in the Installation Guide.
2. **Tap to Remove Debris:** Gently tap the filter against a trash can to dislodge loose dust and debris.
3. **Rinse with Cold Water:** Rinse the filter under cold, running water. Ensure water flows through the pleated material from the clean side to the dirty side to flush out trapped particles. Do not use hot water or detergents.
4. **Air Dry Completely:** Allow the filter to air dry completely for at least 24 hours before reinserting it into the vacuum cleaner. Do not use a dryer or direct heat, as this can damage the filter material. Ensure it is absolutely dry to prevent mold growth and damage to the vacuum motor.

### Replacement Schedule:

Even with regular cleaning, HEPA filters will eventually lose their effectiveness. It is recommended to replace your Acxico HEPA filter every 3 to 6 months, depending on usage frequency and household environment (e.g., presence of pets, allergies). A noticeable decrease in suction power or persistent odors may indicate it's time for a replacement.

## Troubleshooting

If you experience issues with your vacuum cleaner after installing or cleaning the filter, consider the following common troubleshooting steps:

| Problem                      | Possible Cause                                                   | Solution                                                                                                                                        |
|------------------------------|------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Reduced Suction Power        | Clogged or dirty filter; improperly installed filter.            | Clean the filter thoroughly. Ensure the filter is correctly seated and sealed in its compartment. Replace if cleaning does not restore suction. |
| Unusual Odor from Vacuum     | Dirty filter with trapped organic matter; wet filter.            | Clean the filter and ensure it is completely dry before reinstallation. If odor persists, replace the filter.                                   |
| Filter Does Not Fit Properly | Incorrect model compatibility; misalignment during installation. | Verify your vacuum model (Midea SC861 or SC861A). Re-attempt installation, ensuring correct alignment and seating. Do not force the filter.     |

## Specifications

- **Product Name:** Acxico HEPA Filter Replacement Accessory
- **Model Number:** LB363
- **Compatible Devices:** Midea SC861, Midea SC861A Vacuum Cleaners
- **Material:** Filter Paper, Plastic
- **Dimensions (Approximate):**
  - Upper Diameter: 5 cm (2 in)
  - Bottom Diameter: 8.7 cm x 9.5 cm (3.4 in x 3.7 in)
  - Height: 8.3 cm (3.3 in)
- **Weight (Approximate):** 195g (6.87 oz) per filter
- **Reusability:** Reusable (washable)
- **Package Includes:** 2 x Acxico HEPA Filters
