This section outlines the basic steps for operating your FI-7160 scanner.

1. **Power On:** Press the Power button on the control panel to turn on the scanner. Wait for the scanner to initialize.
2. **Prepare Documents:** Ensure documents are free of staples, paper clips, or sticky notes that could cause jams. Fan the edges of the paper to prevent multiple sheets from feeding at once.

4. **Select Scan Profile (Software):** On your computer, open the scanning software (e.g., PaperStream Capture). Select the desired scan profile, which defines settings such as resolution (up to 600 DPI), color mode (mono or color), duplex scanning, and destination folder.
5. **Start Scanning:** Press the 'Scan/Enter' button on the scanner's control panel, or initiate the scan directly from the software interface. The scanner will feed and process the documents.
6. **Review Scans:** After scanning, review the digitized images on your computer to ensure quality and completeness.
7. **Remove Documents:** Collect the scanned documents from the output tray.

The FI-7160 is capable of scanning at speeds up to 60 pages per minute (PPM) for both monochrome and color documents, and supports up to 4000 scans per day. Its duplex scanning feature allows for scanning both sides of a document simultaneously.

6. Maintenance

6.1. Cleaning the Scanner

It is recommended to clean the scanner regularly, especially the rollers and glass surfaces, to prevent paper jams and maintain scan quality.

- **Power Off:** Always turn off the scanner and disconnect the power cord before cleaning.
- **Exterior Cleaning:** Wipe the exterior of the scanner with a soft, dry, lint-free cloth. Do not use abrasive cleaners or solvents.
- **Roller Cleaning:** Refer to the software's maintenance utility for specific instructions on cleaning the feed rollers. Use a cleaning kit or a soft cloth dampened with isopropyl alcohol.
- **Glass Cleaning:** Gently wipe the glass scanning surfaces inside the scanner with a soft, lint-free cloth dampened with a small amount of glass cleaner or isopropyl alcohol. Ensure no residue remains.

6.2. Consumables

Periodically check the condition of consumable parts such as the brake roller and pick roller. These parts wear out over time and may need replacement to ensure proper paper feeding. Consult the Fujitsu website or your dealer for replacement parts and instructions.

7. Troubleshooting

This section addresses common issues you might encounter with your FI-7160 scanner.

Problem	Possible Cause	Solution
Scanner does not power on.	Power cord is disconnected or power outlet is faulty.	Ensure the power cord is securely connected to the scanner and a working power outlet.
Paper jam.	Documents are not loaded correctly, or foreign objects are present.	Remove all documents from the ADF. Open the scanner covers and carefully remove any jammed paper. Ensure documents are free of staples/clips before loading.
Poor scan quality (streaks, blurry images).	Dust or dirt on the scanning glass or rollers.	Clean the scanning glass and rollers as described in the Maintenance section.
Scanner not recognized by computer.	USB cable is disconnected or drivers are not installed correctly.	Ensure the USB cable is securely connected. Reinstall the scanner drivers from the Fujitsu website. Try a different USB port.
Multiple sheets feed at once.	Rollers are dirty or worn, or documents are stuck together.	Clean the feed rollers. Fan the edges of the documents before loading. If the problem persists, the rollers may need replacement.
