4. SETUP

4.1 Unpacking

Carefully remove the iron from its packaging. Remove any labels, protective films, or packaging materials from the

soleplate or body of the iron before first use.

4.2 First Use Preparation

Before using the iron for the first time, it is recommended to iron an old piece of fabric (e.g., a cotton cloth) to ensure any manufacturing residues are removed from the soleplate. Some odor or light smoke may occur during the first heating; this is normal and will dissipate quickly.

4.3 Filling the Water Tank

1. Ensure the iron is unplugged from the mains supply.
2. Open the large filling cap located on the top of the iron.
3. Using a measuring cup, carefully pour tap water into the transparent water tank up to the 'MAX' fill line. Do not overfill.
4. Close the filling cap securely.

5. OPERATING INSTRUCTIONS

5.1 Temperature Selection

Plug the iron into a suitable mains socket. Rotate the temperature control dial to select the appropriate heat setting for your fabric type. The indicator light will illuminate while the iron is heating and turn off when the desired temperature is reached. Always check garment care labels for recommended ironing temperatures.

5.2 Dry Ironing

For dry ironing, ensure the steam control is set to the 'OFF' position. Select the desired temperature and wait for the indicator light to turn off. Iron the garment as needed.

5.3 Steam Ironing

For steam ironing, ensure the water tank is filled. Select a temperature setting suitable for steam (typically indicated on the dial, usually from the '••' setting upwards). Once the indicator light turns off, adjust the steam control to the desired continuous steam level (up to 30g/min). The iron will produce steam as you iron.
