1. Introduction

This manual provides essential information for the safe and efficient operation of your Frigidaire Professional FPIC3077RF 30-inch ADA Compliant Induction Cooktop. Please read all instructions carefully before installation and use to ensure optimal performance and safety.
The Frigidaire Professional FPIC3077RF is a high-performance induction cooktop featuring 4 elements, PowerPlus Induction Technology, a SpacePro Bridge Element, and intuitive knob controls, all designed for precise cooking and ease of use.

2. Important Safety Information

Always adhere to the following safety precautions to reduce the risk of fire, electric shock, or injury.

- **Electrical Safety:** Ensure the cooktop is properly grounded. Do not use extension cords. Disconnect power before servicing.
- **Child Safety:** Do not leave children unattended near the cooktop. Keep controls locked when not in use if applicable.
- **Proper Cookware:** Use only induction-compatible cookware. Non-magnetic cookware will not heat.
- **Hot Surfaces:** Although induction surfaces do not generate heat directly, residual heat from cookware can make the surface hot. Allow to cool before touching.
- **Ventilation:** Ensure adequate ventilation around the cooktop as per installation instructions.
- **Flammable Materials:** Keep flammable materials away from the cooktop surface.

3. Installation and Setup

Professional installation is recommended for this appliance. Refer to the separate installation guide provided with your cooktop for detailed instructions regarding electrical connections, countertop cutout dimensions, and ventilation requirements.

3.1 Unpacking

Carefully remove all packaging materials. Inspect the cooktop for any shipping damage. Report any damage immediately to your dealer.

3.2 Electrical Requirements

This cooktop requires a dedicated, grounded electrical circuit. Consult a qualified electrician to ensure your home's electrical system meets the requirements specified in the installation guide.

3.3 Countertop Preparation

Ensure your countertop is cut to the precise dimensions outlined in the installation manual. The surface must be level and capable of supporting the weight of the cooktop and cookware.

4. Operating Instructions

Your induction cooktop uses electromagnetic fields to heat cookware directly, offering fast and efficient cooking.

4.1 Induction-Compatible Cookware

Only cookware with a magnetic base will work on an induction cooktop. Test cookware by placing a magnet on the bottom; if it sticks, it is compatible.

- Cast iron
- Magnetic stainless steel
- Enamel on steel

Avoid glass, ceramic, aluminum, copper, or non-magnetic stainless steel cookware unless specifically designed for induction.

4.2 Using the Cooking Elements

Each element is controlled by a dedicated knob. To activate an element, place compatible cookware on the desired element and turn the corresponding knob to the desired heat setting (Lo to Hi).

4.3 PowerPlus Induction Technology

PowerPlus Induction Technology provides a rapid boost of power to quickly boil water or sear foods. To activate, turn the knob to the "PowerPlus" setting. This feature is ideal for tasks requiring intense heat for a short duration.

4.4 SpacePro Bridge Element

The SpacePro Bridge Element allows you to combine two cooking zones into one larger zone, perfect for accommodating oversized cookware like griddles or large roasting pans. To activate, place the large cookware over both designated bridge elements and turn on both corresponding knobs. The cooktop will automatically bridge the zones.

5. Care and Cleaning

Regular cleaning helps maintain the appearance and performance of your cooktop.

5.1 Cooktop Surface

- For light soil, wipe with a damp cloth and mild dish soap. Rinse and dry thoroughly.
- For stubborn stains or burned-on food, use a ceramic cooktop cleaner and a non-abrasive pad. Follow the cleaner's instructions.
- Avoid abrasive cleaners, scouring pads, or harsh chemicals that can scratch or damage the surface.

5.2 Control Knobs

The control knobs can be pulled straight off for cleaning. Wash with warm, soapy water, rinse, and dry completely before replacing. Do not immerse the entire control panel in water.

5.3 Stainless Steel Trim (if applicable)

Use a stainless steel cleaner or a damp cloth with mild soap. Always wipe in the direction of the grain to prevent streaking.
