## Taylor 5267459

# Taylor 13.25-inch Glow in the Dark Wall Indoor Outdoor Thermometer Instruction Manual

## INTRODUCTION

---

This manual provides essential information for the proper setup, operation, and maintenance of your Taylor 13.25-inch Glow in the Dark Wall Indoor Outdoor Thermometer. Designed for easy temperature monitoring day or night, this thermometer features bright neon green numbers and a pointer that glow for enhanced visibility in low light conditions. It is suitable for both indoor and outdoor environments, including garages, patios, gardens, and campsites. The thermometer offers a wide temperature range and accurate readings, built with a shatterproof lens to withstand various elements.

## PRODUCT FEATURES

---

- **Glow in the Dark Function:** Dial graphics and pointer glow for up to four hours when exposed to light, providing high visibility at night. This feature does not require battery power.
- **Large Display:** An extra-large 13.25-inch display ensures at-a-glance readings from a distance.
- **Durable Construction:** Features a shatterproof lens designed to withstand harsh outdoor elements without compromising visibility.
- **Wide Temperature Range:** Precision thermometer coil measures temperatures between -60°F to 120°F (-50°C to 50°C).
- **Easy Mounting:** Includes a convenient built-in hanger on the back for simple and secure installation.
- **Dual Scale:** Displays temperatures in both Fahrenheit (°F) and Celsius (°C).

## SETUP AND MOUNTING

---

Follow these steps to properly set up and mount your thermometer:

1. **Select Location:** Choose a location on a wall that is out of direct sunlight for the most accurate readings and optimal glow-in-the-dark performance.
2. **Prepare for Mounting:** Two screws or nails (not included) are required for mounting. Place the first screw approximately 2¾ inches below the point where the top of the thermometer will be positioned, leaving the screw or nail head out approximately ¼ inch. Place the second screw or nail 8 inches below the first.
3. **Mount Thermometer:** Carefully place the thermometer over the screws or nail heads, aligning the built-in hangers on the back with the fasteners.

## OPERATING INSTRUCTIONS

---

The Taylor Glow in the Dark Wall Thermometer operates passively, requiring no batteries or external power. It measures ambient air temperature using a precision coil.

- **Temperature Reading:** The thermometer displays the current temperature on its large dial. The pointer indicates the temperature in both Fahrenheit (°F) and Celsius (°C).
- **Glow Feature:** To activate the glow-in-the-dark feature, ensure the thermometer is exposed to sufficient light during the day. The dial graphics and pointer will absorb light energy and then glow in low light conditions for up to 4 hours.
- **Optimal Placement:** For the most accurate temperature readings, avoid placing the thermometer in direct sunlight

or near heat sources (e.g., vents, appliances) or cold sources (e.g., air conditioning units).

## MAINTENANCE

---

To ensure the longevity and accuracy of your thermometer, follow these simple maintenance guidelines:

- **Cleaning:** Wipe the thermometer clean with a soft, damp cloth. Do not use abrasive cleaners or solvents, as these may damage the finish or the glow-in-the-dark material.
- **Storage:** If storing the thermometer for an extended period, keep it in a dry place away from extreme temperatures.

## TROUBLESHOOTING

---

If you experience issues with your thermometer, consider the following:

- **Inaccurate Readings:** Ensure the thermometer is not in direct sunlight or near any heat/cold sources that could affect its reading. Allow sufficient time for the thermometer to acclimate to the ambient temperature of its location.
- **Glow Feature Not Working:** Verify that the thermometer has been exposed to sufficient light during the day. The glow feature relies on absorbing light energy. If it has been in a dark area, it will not glow.
- **Physical Damage:** While the lens is shatterproof, extreme impact can still cause damage. Inspect for any visible damage if readings are consistently off.

## SPECIFICATIONS

---

Attribute	Detail
Brand	Taylor
Model Name	5267459
Color	Black
Outer Material	Acrylic
Display Type	Analog
Temperature Range	-60°F to 120°F (-50°C to 50°C)
Response Time (Glow)	Up to 4 Hours
Item Weight	1.1 pounds
Power Source	Not Battery Powered (Glow feature is light-activated)
Special Feature	Ultra Clear Screen, Glow in the Dark
UPC	077784038314

## WARRANTY AND SUPPORT

---

This Taylor thermometer comes with a **One (1) Year Limited Warranty**. For warranty claims or product support, please contact the manufacturer, Lifetime Brands Inc., or refer to the contact information provided with your purchase documentation.
