INSTALLATION GUIDE

Before beginning installation, ensure your grill is completely cool and disconnected from its gas supply. It is recommended to replace components one at a time to maintain proper alignment and simplify the process.

1. **Preparation:** Remove cooking grates and existing heat plates from your grill.
2. **Remove Old Burners:** Carefully detach the old burners. Note how they are secured, often with cotter pins at the back. You may need needle-nose pliers. If cotter pins are rusted, be prepared to replace them with new ones from a hardware store.
3. **Disconnect Ignitors:** Disconnect the ignitor wires from the old burners. If the screws are rusted, you might need to snip the wires and re-strip them for the new ignitors.
4. **Install New Burners:** Place the new stainless steel pipe burners into position. Secure them with the cotter pins or appropriate fasteners.
5. **Connect New Ignitors:** Attach the new electronic ignitors to the burners. Route the ignitor wires to the main ignitor button assembly. Use small zip ties to manage excess wire for a tidy installation.

6. **Install Heat Plates:** Position the new stainless steel heat plates over the burners.
7. **Replace Grates:** Carefully place the cooking grates back into the grill.
8. **Test Ignition:** Reconnect the gas supply. Press the ignitor button to test each burner. If a burner does not light, check the ignitor wire connection and ensure the spark is aligned with the gas port on the burner. It may take a moment for gas to flow through new burners. Consider replacing the AA battery in the igniter button if issues persist.

Perfect Fit Work Well

Image: New burners and heat plates perfectly installed in the grill.

MAINTENANCE

Regular maintenance of your grill replacement parts will ensure optimal performance and extend their lifespan.

- **Cleaning Burners:** Periodically clean the burner tubes to prevent blockages from food debris or grease. Use a grill brush or a soft cloth. Ensure burner ports are clear for even flame distribution.
- **Cleaning Heat Plates:** Clean heat plates after each use to remove grease and food residue. Stainless steel heat plates are easy to clean with warm soapy water and a non-abrasive cloth.

- **Inspection:** Regularly inspect burners and heat plates for signs of wear, corrosion, or damage. Replace parts as needed to maintain grilling efficiency and safety.

Image: Easy cleaning of the stainless steel heat plates.

TROUBLESHOOTING

Refer to the table below for common issues and their potential solutions.

Issue	Possible Cause	Solution
Burner not lighting	Clogged ignitor, loose wire, dead battery, gas flow issue	Check ignitor wire connection, replace ignitor battery, clear burner ports, ensure gas supply is open.
Uneven flame	Clogged burner ports, damaged burner	Clean burner ports thoroughly. If damage is present, consider replacing the burner.
Low flame	Low gas pressure, partially clogged burner	Check gas tank level and regulator. Clean burner ports.
Excessive noise/yellow flame	Burner damage, improper air mixture	Inspect burner for damage. Ensure proper installation and alignment.
