1. **Assemble the End Panels:** Connect the vertical and horizontal bars to form the two end panels of the bed frame. Ensure all bolts are finger-tightened initially.
2. **Attach Side Rails:** Connect the long side rails to the assembled end panels. This will begin to form the rectangular base of the loft bed.

- **Access:** Use the integrated ladders to safely access the sleeping area. Always face the ladder when climbing up or down.

- **Guardrail Functionality:** The full-length guardrails are designed to prevent accidental falls. Ensure no objects are placed on the guardrails that could compromise their effectiveness.

## 6. MAINTENANCE

---

Proper maintenance will extend the life and ensure the safety of your loft bed.

- **Cleaning:** Wipe the metal frame with a soft, damp cloth. For stubborn marks, a mild soap solution can be used, followed by drying with a clean cloth. Avoid abrasive cleaners or harsh chemicals, as these can damage the finish.
- **Hardware Check:** Regularly check all bolts, screws, and connections for tightness. Loose hardware can lead to instability and noise. Tighten as necessary.
- **Structural Integrity:** Periodically inspect the frame for any signs of damage, bending, or stress. If any damage is found, discontinue use and contact customer support.

## 7. TROUBLESHOOTING

---

This section addresses common issues you might encounter with your loft bed.

- **Bed is Wobbly or Noisy:**
  - Ensure all bolts and screws are fully tightened.
  - Verify the bed is placed on a level surface. Uneven flooring can cause instability.
  - Check if any components are bent or damaged, which could affect alignment.
- **Parts Do Not Align During Assembly:**
  - Double-check the orientation of the parts against the assembly diagrams.

- Loosen all previously tightened bolts slightly, align the misaligned part, and then retighten everything.
  - If a part appears to be manufactured incorrectly (e.g., misaligned holes, excessive weld material), contact customer support for a replacement.
- **Screws Stripping During Assembly:**
    - Avoid overtightening screws. Tighten until snug, then give a quarter turn.
    - Ensure you are using the correct screw for the corresponding hole.
