## MAINTENANCE

### Cleaning the Soleplate

To maintain optimal performance of the pearl ceramic soleplate, clean it regularly. Ensure the iron is unplugged and completely cool before cleaning. Use a damp cloth with a mild detergent to wipe the soleplate. For stubborn residue, a non-abrasive cleaner specifically designed for iron soleplates can be used. Do not use abrasive scouring pads or harsh chemicals.

### Self-Clean Function

The iron includes a self-clean feature to prevent mineral buildup. It is recommended to use this function approximately once a month, or more frequently if you use the steam function often or live in an area with hard water. Refer to the full

user manual for detailed instructions on performing the self-clean cycle.

## Water Tank Care

Always empty the water tank after each use to prevent mineral buildup and prolong the life of your iron. Store the iron with an empty water tank.

## TROUBLESHOOTING

If you encounter issues with your Maytag M1400 iron, please refer to the following common troubleshooting tips:

- **Iron not heating:** Ensure the iron is securely plugged into a working electrical outlet. Check the temperature setting on the digital interface.
- **No steam or insufficient steam:** Verify that the water tank is filled with tap water. Ensure the iron has reached the appropriate temperature setting for steam generation. Check if the steam control is set to the desired level.
- **Water leaking from soleplate:** This can occur if the temperature setting is too low for steam generation, causing water to drip instead of vaporize. Increase the temperature setting. Ensure the water tank is not overfilled.
- **Iron not gliding smoothly:** Clean the soleplate as described in the Maintenance section to remove any residue that might be causing friction.
- **Auto-shutoff activating too frequently:** Ensure the iron is being used actively. The auto-shutoff is a safety feature designed to activate when the iron is stationary for a period.
