1. **MODEL:** AVR-X6700H BK.E3,
AVR-X6700H BK.E2, AVR-X6700H SP.E2,
AVR-X6700H BK.E1C
2. **SUBJECT:** Audible noise on center channel and intermittently on FL
channel when "ECO mode" off.
3. **SYMPTOM:**
There is audible noise on all channels when no source is played and also when
volume is set to "0". And the center channel has intermittent sound drops.
(QS 17-48 from the EU region.)
4. **CAUSE:**
The cause is noise jumping into the shield wire from the Analog audio unit to
the Power supply unit. Therefore, the shield wire was fixed to the Analog audio unit
with three type pins, so noise did not jump into the shield wire, but it was
generated due to variations in the shield wire fixing during manufacturing.
