## 3. SETUP AND ASSEMBLY

Assembly typically requires one person and approximately 30-60 minutes. An electric drill (not included) may be helpful for certain steps.

- 1. Unpack Components:** Carefully remove all parts from both packages and lay them out on a soft, clean surface to prevent scratches. Verify all components are present against the packing list.
- 2. Assemble Desk Frame:** Attach the lifting columns to the feet. Ensure the crossbeam is correctly oriented.
- 3. Attach Crossbeam:** Secure the crossbeam to the lifting columns. Note that while some holes are pre-drilled for legs, the center holes for the crossbeam and cable tray may require self-tapping screws. Apply firm pressure with an electric drill for easy installation.
- 4. Install Motors and Control Box:** Follow the manual to connect the motor cables to the control box and secure the control box to the frame.
- 5. Attach Desktop:** Carefully place the desktop onto the assembled frame. Align the pre-drilled holes on the desktop with the frame and secure with screws.
- 6. Install Control Panel and Power Strip:** Mount the 6-button digital control panel and the clamp-on power

strip to the desired location on the desktop. The power strip can be clipped to the back or side.

7. **Cable Management:** Utilize the included cable management device to organize and secure all power and data cables underneath the desk. This helps prevent cables from snagging during height adjustments.
