Cleaning the Drum

The drum is made of stainless steel. To prevent odors and maintain hygiene, run a drum cleaning program (if available) or a hot wash cycle with a suitable cleaning agent periodically.

If the water supply is slow, the water inlet filter may be clogged. Close the water tap, disconnect the hose, and clean the filter with a brush. Reconnect securely.

Cleaning the Pump Filter

The pump filter should be cleaned regularly to prevent blockages. Refer to the diagram in the full manual for the exact location and procedure. Always drain residual water before opening the filter cover.
