

## Moen M0107

# Moen M0107 Faucet Seat Instruction Manual

Model: M0107

## INTRODUCTION

This manual provides essential information for the proper installation, use, and maintenance of your Moen M0107 Faucet Seat. Please read these instructions carefully before beginning any work to ensure safe and correct operation.

The Moen M0107 Faucet Seat is designed for use with Emco 9/16 inch - 27 Tub and Shower Faucets, ensuring a proper seal and preventing leaks.

## PRODUCT OVERVIEW

**Image:** Two brass Moen M0107 Faucet Seats. These small, cylindrical brass components feature external threads on one end and a smooth, slightly flared opening on the other, designed to create a watertight seal within a faucet.

The Moen M0107 Faucet Seat is a critical component for maintaining the integrity of your tub and shower faucet. It is made of durable brass, designed for longevity and reliable performance.

## SETUP AND INSTALLATION

---

### Tools Required:

- Adjustable wrench or basin wrench
- Screwdriver (Phillips or flathead, depending on faucet handle)
- Plumber's tape (optional, for threads)
- Flashlight (optional)

### Installation Steps:

1. **Turn off the water supply** to the tub and shower faucet. This is a crucial safety step to prevent flooding.
2. Remove the faucet handle and trim plate to access the faucet body.
3. Carefully remove the old faucet seat. This may require a seat wrench if it is tightly seated or corroded.
4. Clean the area where the new faucet seat will be installed, ensuring no debris or mineral buildup remains.
5. Apply a small amount of plumber's grease or tape to the threads of the new Moen M0107 Faucet Seat (optional, but recommended for easier future removal and better seal).
6. Insert the new Moen M0107 Faucet Seat into its designated position within the faucet body. Ensure it is seated firmly and correctly.
7. Tighten the faucet seat using an appropriate wrench, but do not overtighten, as this can damage the seat or faucet body.
8. Reassemble the faucet handle and trim plate.
9. Slowly turn the water supply back on and check for any leaks.

*If you encounter any difficulties, it is recommended to consult a professional plumber.*

## OPERATING

---

Once installed, the Moen M0107 Faucet Seat operates passively as an internal component of your faucet. Its function is to provide a secure sealing surface for the faucet's stem or washer, preventing water leaks when the faucet is in the closed position.

Proper operation is indicated by the absence of drips or leaks from the faucet spout when the water is turned off.

## MAINTENANCE

---

The Moen M0107 Faucet Seat is designed for durability and typically requires minimal maintenance. However, its lifespan can be affected by water quality and usage frequency.

- **Regular Inspection:** If you notice persistent dripping or leaking from your faucet, the faucet seat may be worn and require replacement.
- **Cleaning:** When replacing other faucet components, it is good practice to gently clean the area around the faucet seat to remove any mineral deposits. Use a non-abrasive cleaner and a soft cloth.
- **Replacement:** Replace the faucet seat with a genuine Moen M0107 part if it shows signs of wear, corrosion, or damage.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
Faucet drips or leaks from spout when off.	Worn or damaged faucet seat.	Replace the Moen M0107 Faucet Seat. Ensure proper installation and tightening.
Difficulty installing new seat.	Mineral buildup in faucet body; incorrect alignment.	Clean the faucet body thoroughly. Ensure the seat is aligned correctly before tightening. Use plumber's grease.

## SPECIFICATIONS

Attribute	Detail
Model Number	M0107
Brand	Moen
Compatibility	Emco 9/16 in - 27 Tub and Shower Faucets
Material	Brass
Product Dimensions	30.48 x 20.32 x 5.08 cm (12 x 8 x 2 inches)
