2. SETUP AND INSTALLATION

The Aiiibe 64GB USB 2.0 Flash Drive is designed for plug-and-play functionality, requiring no special software installation.

2.1 System Requirements

- **Operating Systems:** Windows 2000/7/8/8.1/10/Vista/XP/ME, Linux, Mac OS 10.3 and above.
- **USB Port:** Compatible with USB 2.0 and USB 1.1 ports.

2.2 Connecting the Flash Drive

1. Locate an available USB port on your computer, laptop, TV, car audio system, or other compatible device.
2. Extend the USB connector by sliding the green mechanism on the flash drive.
3. Insert the flash drive firmly into the USB port.
4. The device should automatically recognize the flash drive. A new drive letter will appear in your computer's file explorer (e.g., 'Removable Disk (E:)').

3.4 Safe Removal

Always safely eject the flash drive before physically removing it from your device to prevent data corruption.

- **Windows:** Right-click the USB icon in the system tray (bottom right of screen), then select 'Eject [USB Device Name]'
- **Mac:** Drag the flash drive icon from the desktop to the Trash, or click the Eject icon next to the drive in Finder.

4. MAINTENANCE

Proper care ensures the longevity and reliable performance of your flash drive.

- **Physical Protection:** Utilize the retractable design to protect the USB connector from dust and damage when not in use. Avoid dropping the device or subjecting it to strong impacts.

- **Environmental Conditions:** Store the flash drive within the recommended operating temperatures (0°C to 60°C) and storage temperatures (-20°C to 85°C). Avoid exposure to extreme heat, cold, or moisture.
- **Cleaning:** If necessary, gently wipe the exterior of the flash drive with a soft, dry cloth. Do not use liquid cleaners or solvents.

5. TROUBLESHOOTING

If you encounter issues with your Aiiibe 64GB USB 2.0 Flash Drive, refer to the following common solutions.

5.1 Drive Not Recognized

- **Check Connection:** Ensure the flash drive is fully inserted into the USB port.
- **Try Another Port:** Connect the flash drive to a different USB port on your computer or device.
- **Try Another Device:** Test the flash drive on a different computer or compatible device to determine if the issue is with the drive or the original device.
- **Restart Device:** Sometimes, restarting your computer can resolve recognition issues.
- **Check Device Manager (Windows):** Open Device Manager, look for 'Disk drives' or 'Universal Serial Bus controllers'. If the drive appears with a yellow exclamation mark, try updating or reinstalling its driver.

5.2 Slow Transfer Speeds

- **USB Port Type:** Ensure you are using a USB 2.0 port for optimal speeds. Using a USB 1.1 port will result in slower transfers.
- **File Size and Type:** Transfer speeds can vary based on the size and number of files. Many small files typically transfer slower than one large file of the same total size.
- **Background Processes:** Close any unnecessary applications or processes running in the background that might be consuming system resources.
- **Drive Fragmentation:** While less common for flash drives, defragmenting (Windows) or verifying the disk (Mac) can sometimes help.

5.3 Data Corruption or Errors

- **Safe Ejection:** Always safely eject the drive before removal. Unplugging it directly can lead to data corruption.
- **Scan for Errors:** Use your operating system's built-in disk error checking tools (e.g., 'Error checking' in Windows, 'First Aid' in Disk Utility on Mac).
- **Reformat Drive (Caution):** If the drive is consistently showing errors and you have backed up all important data, you may consider reformatting the drive. This will erase all data. The default format is exFAT.
