4. Setup

4.1 Power Connection

1. Ensure the power switch on the machine is in the 'OFF' position.
2. Insert the machine plug into the machine's power socket.
3. Insert the power plug (Type C) into a suitable electrical outlet.

4.2 Bobbin Winding

Refer to the markings on your machine for the bobbin winding path. Typically, you will place a spool of thread on the spool pin, guide the thread through the tension disc for bobbin winding, and then wind it onto an empty bobbin placed on the bobbin winder spindle.

4.3 Upper Threading

Follow the numbered threading path indicated on the machine. This usually involves guiding the thread from the spool pin, through the thread guides, down into the tension assembly, up and over the take-up lever, and finally down to the needle.

4.4 Needle Installation

Ensure the flat side of the needle faces the back of the machine. Loosen the needle clamp screw, insert the new needle as far up as it will go, and then tighten the screw securely.

5. Operating Instructions

5.1 Stitch Selection

Turn the stitch selector dial (refer to Figure 3.4) to choose your desired stitch pattern. The available stitches are displayed on the machine's front panel.

5.2 Stitch Length Adjustment

Adjust the stitch length using the stitch length dial (refer to Figure 3.4). Higher numbers typically indicate longer stitches.

5.3 Sewing Basics

Place your fabric under the presser foot. Lower the presser foot lever. Gently press the foot controller to start sewing. Guide the fabric smoothly without pulling or pushing excessively.

6. Maintenance

6.1 Cleaning

Regularly clean lint and dust from the bobbin case area and feed dogs using a small brush. Always unplug the machine before cleaning.

6.2 Lubrication

Consult your machine's specific lubrication points if applicable. Not all modern sewing machines require user lubrication.

6.3 Needle Replacement

Replace the needle frequently, especially after sewing thick fabrics or if it becomes bent or dull. A dull needle can cause skipped stitches or fabric damage.

7. Troubleshooting

This section addresses common issues you might encounter.

- **Skipped Stitches:** Check if the needle is inserted correctly, if it's bent or dull, or if the correct needle type is being used for the fabric.
- **Thread Breaking:** Ensure the machine is threaded correctly, the tension is appropriate, the needle is not damaged, and the thread quality is good.
- **Machine Jamming:** Remove any tangled thread from the bobbin area. Ensure the bobbin is wound evenly and inserted correctly.
- **Uneven Stitches:** Verify proper threading, correct tension settings, and that the fabric is being fed smoothly.
