For long time recorders, storage capacity is the key. This can prevent the recorder from being unable to continue recording due to insufficient memory, and users lose important recording data.

Files stored in 64G are 2 times that of 32G and 4 times that of 16G

No longer worry about losing important recordings due to insufficient memory.

4. SETUP

4.1 Charging the Device

Before initial use, fully charge the recorder. Connect the provided USB cable to the recorder's charging port and plug the other end into a USB power adapter (not included) or a computer's USB port. The indicator light will show charging status and turn off when fully charged.

5. OPERATING INSTRUCTIONS

5.1 Power On/Off

To power on the device, slide the **ON/OFF** switch to the **ON** position. To power off, slide the **ON/OFF** switch to the **OFF** position. A small indicator light will briefly illuminate to confirm the action.

5.2 Standard Recording

1. Ensure the device is powered on.
2. Slide the **VOR ON/VOR OFF** switch to the **VOR OFF** position for continuous recording.
3. The device will begin recording immediately.
4. To stop recording, slide the **ON/OFF** switch to the **OFF** position. The recording will be saved automatically.

5.3 Voice Activated Recording (VOR)

The VOR function allows the recorder to start recording automatically when sound is detected above a certain threshold (approximately 35 decibels) and pause when the sound level drops below this threshold. This conserves storage space and battery life.

1. Ensure the device is powered on.
2. Slide the **VOR ON/VOR OFF** switch to the **VOR ON** position.
3. The device will enter voice-activated recording mode. Recording will start when sound is detected and pause when silence occurs.
4. To stop VOR, slide the **ON/OFF** switch to the **OFF** position. The recording will be saved automatically.

Note: *If you need to capture all sounds, including very low-level audio, it is recommended to use standard continuous recording (VOR OFF) to avoid missing any details.*

6. KEY FEATURES

6.1 64GB Storage Capacity

The recorder comes with a generous 64GB internal storage, providing ample space for up to 1000 hours of audio recordings. This capacity is significantly larger than many standard recorders, reducing concerns about running out of space during extended use.

6.2 Long Battery Life

Equipped with a built-in high-capacity battery, the recorder can operate continuously for approximately 300 hours on a single full charge, making it suitable for extended recording sessions without frequent recharging.

6.3 Built-in Magnet

The recorder features a strong built-in magnet, allowing it to be securely attached to any magnetic metal surface. This provides flexible placement options for discreet or convenient recording.

6.5 DSP Intelligent Noise Reduction

The device incorporates a built-in DSP (Digital Signal Processor) intelligent noise reduction chip. This technology helps to filter out background noise, resulting in clearer and more intelligible audio recordings.

7. MAINTENANCE

- **Cleaning:** Use a soft, dry cloth to clean the exterior of the device. Do not use liquid cleaners or solvents.
- **Storage:** Store the recorder in a cool, dry place away from direct sunlight and extreme temperatures.
- **Battery Care:** To prolong battery life, avoid fully discharging the battery frequently. Charge the device regularly, even if not in use for extended periods.
- **Data Management:** Regularly transfer important recordings to a computer and back them up to prevent data loss.

8. TROUBLESHOOTING

- **Device not turning on:** Ensure the battery is charged. Connect the device to a power source and allow it to charge for at least 30 minutes before attempting to power it on again.
- **Cannot record:** Check if the device has sufficient storage space. Connect to a computer and delete unnecessary files if the storage is full. Ensure the ON/OFF switch is in the ON position.
- **Poor audio quality/Excessive background noise:** While the device has DSP noise reduction, extreme environmental noise can still affect recording quality. Try to record in quieter environments. Ensure the microphone is not obstructed.
- **Battery not holding charge:** If the battery life significantly decreases over time, it may indicate battery degradation. Ensure you are using the correct charging cable and power source.
- **Device not recognized by computer:** Ensure the USB cable is securely connected to both the recorder and the computer. Try a different USB port or cable. Restart your computer.
