4. OPERATING INSTRUCTIONS

4.1 Using the Sink

The Franke Sirius S2D 611-78 XL sink is designed for daily kitchen tasks. Its large single bowl provides ample space for washing dishes and preparing food. The Tectonite material offers durability and resistance to common kitchen wear.

4.2 Automatic Stopper

Your sink is equipped with an automatic stopper for convenient water retention and drainage. To operate, locate the control button, typically positioned on the sink's edge or countertop. Pressing the button will open or close the drain stopper. This feature allows for hands-free control of the drain.

4.3 Waste Mill Compatibility

The sink is designed to allow for the mounting of a waste disposal unit (waste mill). If you choose to install a waste mill, ensure it is compatible with a 3 1/2" drain opening and follow the waste mill manufacturer's specific installation and operating instructions.

5. MAINTENANCE AND CARE

Proper care will help maintain the appearance and extend the lifespan of your Franke Tectonite sink.

- **Daily Cleaning:** For routine cleaning, wipe the sink surface with a soft, dry cloth after each use to prevent water spots and mineral buildup.
- **Stubborn Stains:** For more stubborn stains, use a mild dish soap and a soft sponge. Rinse thoroughly with water and dry immediately.
- **Avoid Abrasives:** Do not use abrasive cleaners, scouring pads, steel wool, or harsh chemical cleaners (e.g., bleach, ammonia-based products) as these can damage the Tectonite finish.
- **Heat Resistance:** While Tectonite is heat resistant, it is recommended to use a trivet or hot pad for extremely hot pots and pans to prevent potential thermal shock or discoloration over time.
- **Preventing Scratches:** Although durable, avoid dragging heavy or sharp objects across the sink surface to minimize the risk of scratches.

6. TROUBLESHOOTING

This section addresses common issues you might encounter with your kitchen sink. For problems not listed here, please contact customer support.

- **Slow Drainage:**

Possible Cause: Blockage in the drain or P-trap.

Solution: Remove the drain stopper and clear any visible debris. If the issue persists, the P-trap may need to be cleaned. Consult a plumber if necessary.

- **Leaks Around Drain:**

Possible Cause: Improperly sealed drain assembly or loose connections.

Solution: Ensure all connections to the drain assembly are tight. The sealant around the drain flange may need to be reapplied. Turn off water supply before attempting repairs.

- **Water Spots/Mineral Buildup:**

Possible Cause: Hard water drying on the sink surface.

Solution: Wipe the sink dry after each use. For existing spots, use a solution of equal parts white vinegar and water, apply with a soft cloth, let sit for a few minutes, then rinse and dry.
