2. SAFETY INFORMATION

Always observe general safety precautions when working with power tools and accessories. Failure to do so may result in serious injury or property damage.

- **Wear Personal Protective Equipment (PPE):** Always wear safety glasses, dust masks, and hearing protection when operating an oscillating tool with sanding accessories.
- **Ensure Proper Ventilation:** Sanding operations can generate fine dust. Work in a well-ventilated area or use a dust extraction system.
- **Secure Workpiece:** Always clamp or otherwise secure the material being sanded to prevent movement during operation.
- **Inspect Accessories:** Before each use, inspect the sandpaper pads for any damage, excessive wear, or defects. Do not use damaged accessories.
- **Tool Compatibility:** Ensure the sandpaper pads are compatible with your specific oscillating multi-tool.
- **Disconnect Power:** Always disconnect the oscillating tool from its power source before changing accessories or performing any maintenance.

3. PACKAGE CONTENTS

The Hyper Tough 20 Piece Oscillating Sandpaper Kit (JB98009J) includes:

- 20 x Oscillating Sandpaper Pads (various grits)

4. SETUP AND INSTALLATION

Follow these steps to properly attach the sandpaper pads to your oscillating multi-tool:

1. **Ensure Tool is Off and Unplugged:** Before attaching any accessory, verify that your oscillating tool is switched off and disconnected from the power supply to prevent accidental startup.
2. **Select Appropriate Sanding Pad:** Choose a sandpaper pad with the desired grit for your application. Coarser grits (lower numbers) remove material faster, while finer grits (higher numbers) provide a smoother finish.
3. **Attach to Sanding Base:** The sandpaper pads feature a hook-and-loop (Velcro-style) backing. Align the sandpaper pad with the sanding base plate of your oscillating tool and firmly press it into place. Ensure the holes on the sandpaper align with any dust extraction holes on the sanding base, if

applicable.

4. **Verify Secure Attachment:** Gently tug on the sandpaper pad to confirm it is securely attached to the sanding base. It should not easily detach or shift.

5. OPERATING INSTRUCTIONS

Once the sandpaper pad is securely attached and safety precautions are observed, you can begin sanding:

1. **Connect Power:** Plug in your oscillating tool or ensure its battery is charged and inserted.
2. **Start Tool:** Turn on the oscillating tool. Allow it to reach full operating speed before contacting the workpiece.
3. **Apply to Workpiece:** Gently bring the sanding pad into contact with the surface to be sanded. Apply light, even pressure. Avoid pressing too hard, as this can reduce sanding effectiveness, overheat the sandpaper, and potentially damage the workpiece or tool.
4. **Move Evenly:** Move the tool smoothly and evenly across the surface. For best results, sand with the grain of the wood when applicable.
5. **Monitor Sandpaper Wear:** As you sand, the abrasive grit on the sandpaper will wear down. Replace

the sandpaper pad when it becomes dull or clogged to maintain optimal performance and prevent damage to the workpiece.

6. **Finish:** Once sanding is complete, turn off the oscillating tool and disconnect it from the power source.

6. MAINTENANCE

Proper maintenance extends the life of your sandpaper pads and ensures consistent performance.

- **Clean Pads:** After use, remove any accumulated dust or debris from the sandpaper pads. A stiff brush or compressed air can be used carefully.
- **Storage:** Store sandpaper pads in a clean, dry environment away from direct sunlight and extreme temperatures. Keep them flat to prevent warping.
- **Inspect Before Use:** Always inspect pads for wear, tears, or damage before attaching them to the tool.

7. TROUBLESHOOTING

Most issues related to sandpaper performance can be resolved with simple checks.

Problem	Possible Cause	Solution
Poor sanding results / Slow material removal	<ul style="list-style-type: none">• Sandpaper is dull or clogged.• Incorrect grit selected for the task.• Insufficient pressure applied.	<ul style="list-style-type: none">• Replace with a new sandpaper pad.• Use a coarser grit for initial material removal.• Apply light, even pressure.
Sandpaper detaches during use	<ul style="list-style-type: none">• Pad not securely attached.• Hook-and-loop backing worn out.• Excessive heat buildup.	<ul style="list-style-type: none">• Ensure pad is firmly pressed onto the sanding base.• Replace the sandpaper pad.• Reduce pressure and allow the tool to cool.
