# Traxxas 9072 Assembled Tires and Wheels Instruction Manual

Model: 9072

## 1. INTRODUCTION

This instruction manual provides important information regarding the proper installation, usage, and maintenance of your Traxxas 9072 assembled and glued tires and wheels. Please read this manual thoroughly to ensure optimal performance and longevity of your product.

## 2. PRODUCT OVERVIEW

The Traxxas 9072 set includes two assembled and pre-glued tires and wheels, designed for specific Traxxas remote control vehicles. These units are ready for immediate installation.

**Image 2.1:** Front and side view of the Traxxas 9072 assembled tires and wheels. The tires feature an aggressive tread

pattern for off-road performance, and the wheels are a black chrome finish with a multi-spoke design.

### 3. SETUP AND INSTALLATION

---

Follow these steps for proper installation of your new tires and wheels:

1. **Vehicle Preparation:** Ensure your remote control vehicle is powered off and placed on a stable surface.
2. **Remove Existing Wheels:** Carefully remove the wheel nuts from the existing wheels using an appropriate wrench. Keep the nuts and any washers in a safe place.
3. **Inspect Axles:** Check the vehicle's axles for any debris or damage. Clean as necessary.
4. **Install New Wheels:** Align the new Traxxas 9072 wheels with the vehicle's axles. Ensure the hex hub on the wheel properly engages with the hex on the axle.
5. **Secure Wheels:** Reinstall the wheel nuts and tighten them securely. Avoid over-tightening, which can damage the wheel or axle.
6. **Final Check:** Gently spin each wheel to ensure it rotates freely without obstruction.

For detailed vehicle-specific installation instructions, refer to your vehicle's owner's manual.

### 4. OPERATING CONSIDERATIONS

---

To maximize the performance and lifespan of your Traxxas 9072 tires and wheels, consider the following:

- **Terrain:** These tires are designed for various off-road conditions. Excessive use on abrasive surfaces like asphalt or concrete can accelerate wear.
- **Tire Pressure:** While RC tires do not typically require inflation, ensure the foam inserts (if present) are properly seated within the tire for consistent performance.
- **Driving Style:** Aggressive driving, such as hard braking and acceleration, can increase tire wear and stress on the wheel-to-tire bond.

### 5. MAINTENANCE

---

Regular maintenance helps preserve the condition and performance of your tires and wheels:

- **Cleaning:** After use, especially in dirty or wet conditions, clean the tires and wheels. Use a soft brush or cloth and mild soap with water. Rinse thoroughly and allow to air dry completely.
- **Inspection:** Periodically inspect the tires for cuts, tears, or excessive wear. Check the wheel for cracks, bends, or damage to the hex hub.
- **Adhesion Check:** Verify that the tire remains securely glued to the wheel. If separation occurs, specialized RC tire glue may be used for repair, though replacement is often recommended for optimal performance.
- **Storage:** Store tires and wheels in a cool, dry place away from direct sunlight and extreme temperatures, which can degrade rubber compounds.

### 6. TROUBLESHOOTING

---

This section addresses common issues you might encounter:

Problem	Possible Cause	Solution
Tire separating from wheel	Aggressive driving, prolonged use, manufacturing defect	Re-glue with specialized RC tire glue or replace the tire/wheel assembly.
Uneven tire wear	Improper vehicle alignment, unbalanced wheel, aggressive cornering	Check vehicle alignment, inspect for bent axles, consider rotating tires if applicable.
Wheel wobble	Loose wheel nut, bent axle, damaged wheel hex	Tighten wheel nut, inspect axle for bends, check wheel hex for damage.
