2. Setup and Installation

Unpacking:

Carefully remove the freezer from its packaging. Inspect for any shipping damage. Retain packaging materials for future

transport or storage if needed.

Placement:

Choose a location with adequate ventilation and away from direct sunlight or heat sources. Ensure there is sufficient space around the unit for proper air circulation. The compact design makes it suitable for various rooms, including kitchens, apartments, offices, dorms, and garages.

Initial Setup:

After placing the freezer in its desired location, it is crucial to let it stand upright for at least 24 hours before plugging it in. This allows the refrigerant fluids to settle, preventing potential damage to the cooling system.
The freezer is equipped with adjustable feet to ensure stability and proper leveling on uneven surfaces. Adjust these feet as necessary to prevent wobbling.

- **Levels 3-7 (Freezer Temperature):** Suitable for freezing meat, seafood, and ice cream, with a temperature range from -11.2℉ (-24℃) to 32℉ (0℃).

4. Maintenance

Cleaning:

Regular cleaning helps maintain the efficiency and longevity of your freezer. Unplug the unit before cleaning. Use a soft cloth with mild detergent and warm water to clean the interior and exterior surfaces. Avoid abrasive cleaners or sharp objects that could damage the finish or liner.
The removable basket can be washed with soap and water.

Defrosting:

This is a manual defrost chest freezer. When ice buildup on the interior walls reaches approximately 1/4 inch (6 mm) thickness, it's time to defrost. To defrost:

1. Unplug the freezer from the power outlet.
2. Remove all food items and store them in another freezer or cooler.
3. Open the lid and locate the drain outlet at the bottom of the freezer.
4. Place a shallow pan or towel under the drain dial on the exterior to collect water.
5. Unscrew the drain dial to allow water to flow out.
6. Allow the ice to melt naturally. You can speed up the process by placing bowls of hot water inside the freezer (do not use sharp objects to chip ice).
7. Once all ice has melted, clean and dry the interior thoroughly.
8. Close the drain dial, plug the unit back in, and allow it to cool down before returning food items.
