6. Maintenance

Proper maintenance ensures the longevity and optimal performance of your hair dryer.

Cleaning the Air Inlet:

Regularly check and clean the air inlet at the back of the dryer. Accumulated hair and dust can reduce airflow and lead to overheating.

- Unplug the dryer from the power outlet.
- Use a vacuum cleaner, a soft brush (like a toothbrush), or a tissue to gently remove any hair or dust from the surface of the air inlet.
- Do not push or rub forcefully, as this may damage the air inlet.

Storage:

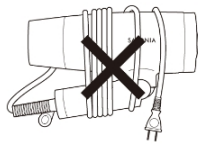

Store the power cord without putting stress on it. Do not wrap the power cord tightly around the main unit or store it in a tangled state, as this can cause damage to the cord, leading to short circuits, electric shocks, or fire hazards.
