6. MAINTENANCE

To ensure the longevity and proper function of your SANUS Soundbar TV Mount, follow these simple maintenance guidelines:

- **Cleaning:** Dust the mount periodically with a soft, dry cloth. Avoid abrasive cleaners or solvents that could damage the finish.

- **Connection Check:** Every 6-12 months, inspect all screws and connections to ensure they remain tight and secure. Re-tighten if necessary.
- **Movement Check:** If using the height or depth adjustment features frequently, periodically check for smooth operation and ensure all locking mechanisms engage properly.

7. TROUBLESHOOTING

If you encounter any issues with your SANUS Soundbar TV Mount, refer to the following common troubleshooting tips:

- **Soundbar not level:** Ensure the mount is installed evenly on the TV's VESA holes. Adjust the height and depth mechanisms to fine-tune the soundbar's alignment.
- **Difficulty adjusting height/depth:** Check that the easy release latch is fully disengaged for height adjustment. For depth adjustment, ensure no cables are obstructing the movement. Lubrication is generally not required, but ensure no debris is in the tracks.
- **Cables obstructed:** Utilize the depth adjustment feature to move the soundbar forward, providing better access to ports. Ensure cables are routed neatly and not pinched by the mount.
- **Mount feels unstable:** Re-check all mounting screws connecting the mount to the TV and the soundbar to the mount. Ensure they are tightened according to the installation instructions. Verify that your TV mount is securely installed to the wall.

If problems persist, contact SANUS Customer Care for further assistance.
