## 6. MAINTENANCE

---

Regular cleaning and maintenance will help preserve the appearance and functionality of your shower column.

- **Cleaning:** Clean the surface of the shower column with a soft, damp cloth and a mild, non-abrasive soap. Rinse thoroughly with clean water and dry with a soft cloth to prevent water spots.
- **Avoid Harsh Cleaners:** Do not use abrasive sponges, scouring pads, or cleaners containing ammonia, bleach, or alcohol, as these can damage the finish.
- **Nozzle Cleaning:** Periodically clean the nozzles of the overhead shower and body jets to remove any mineral buildup. Many modern shower heads feature flexible silicone nozzles that can be easily wiped clean.
- **Check Connections:** Periodically inspect all water connections for any signs of leaks or corrosion. Tighten connections if necessary.

## 7. TROUBLESHOOTING

If you encounter issues with your shower column, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Low Water Pressure	Partially closed shut-off valves; mineral buildup in nozzles; kinked supply line.	Ensure all water supply valves are fully open. Clean shower head and jet nozzles. Check supply lines for obstructions.
Leaking from Connections	Loose connections; worn seals or O-rings.	Carefully tighten all connections. If leaks persist, replace seals or O-rings.
Inconsistent Water Temperature	Improper hot/cold water supply connection; issue with water heater.	Verify hot and cold water lines are correctly connected. Consult a plumber if the issue persists, as it may relate to your water heater.
Diverter Not Switching Functions	Mineral buildup; internal mechanism issue.	Attempt to gently work the diverter to dislodge any buildup. If unresponsive, professional service may be required.
