Product Features

- **100% Metal Construction:** Ensures durability and longevity.
- **Innovative Attractive Design:** Features anti-clogging nozzles and a sleek, modern aesthetic.
- **Dual Shower Heads:** Includes a handheld shower head and an additional fixed shower head.
- **5 Spray Settings:** Choose from Power Mist, Rain Spray, Power Rain, Power Massage, and Rain & Massage.
- **Durable Components:** Rust-free, 60-inch stainless steel hose and sturdy mount holder.
- **Convenience:** Facilitates bathing for children and pets, and simplifies shower cleaning.
- **Easy Installation:** Sturdy, handle-free mount installs over any standard shower arm without tools.
- **Swivel Ball:** Allows for adjustable shower head angle.

Package Contents

Verify that all components are present before beginning installation:

- Handheld Shower Head
- Overhead Shower Head
- 60-inch Stainless Steel Hose
- Mounting Bracket
- Plastic Diverter
- Washers (various sizes)
- Plumber's Tape (Sealant Tape)

Safety Information

- Always turn off the main water supply to your shower before beginning any installation or maintenance to prevent leaks or water damage.
- Ensure all connections are secure to prevent leaks. Do not overtighten fittings, as this can cause damage.
- Use plumber's tape on all threaded connections to ensure a watertight seal.
- Do not use harsh chemicals or abrasive cleaners on the shower system, as they may damage the finish.

Installation Instructions

Follow these steps for a quick and easy installation. No tools are needed for most steps.

1. **Turn Off Water Supply:** Make sure the shower water is turned off completely to prevent any leaks during installation.
2. **Prepare Shower Arm:** Remove your old shower head. Clean any grime or rust from the shower arm threads using a rag or old toothbrush.
3. **Apply Plumber's Tape:** Apply 2-3 turns of plumber's tape (sealant tape) tightly around the threads of the shower arm. Wrap the tape in a clockwise direction so it doesn't become undone when screwing on the new shower head components.
4. **Attach Bracket:** Screw the mounting bracket onto the shower arm. Hand-tighten first. For protection, you may use a piece of cloth and pliers to gently tighten further, but do not overtighten.
5. **Install Plastic Diverter:** Attach the plastic diverter to the bracket. Ensure washers are properly seated.
6. **Connect Overhead Shower:** Screw the overhead shower head onto the diverter.
7. **Attach Shower Hose:** Connect one end of the 60-inch stainless steel hose to the diverter and the other end to the handheld shower head. Ensure washers are in place at both connections.
8. **Secure Handheld Shower:** Place the handheld shower head into its holder on the mounting bracket.
9. **Test for Leaks:** Turn on the water supply slowly and check for any leaks. If leaks occur, turn off the water, reapply plumber's tape, and tighten the connections. Do not overtighten.

Dual Shower System

Make sure shower is turned off completely
This will prevent any water from leaking while you work.

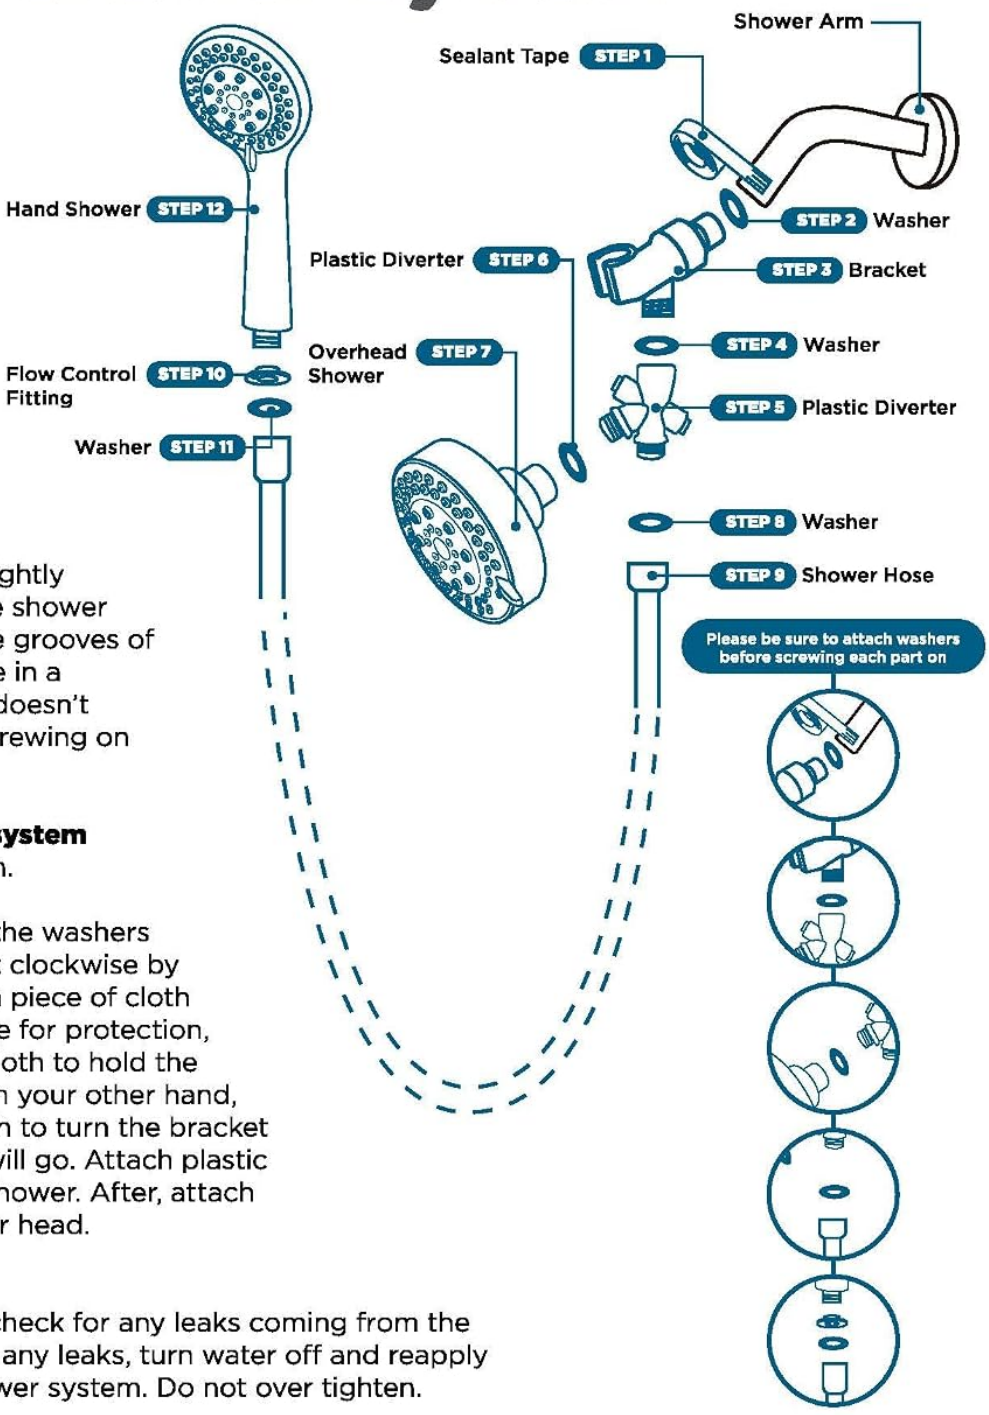

Clean threads off shower arm
Remove old tape from shower arms threads. Clean out any grime and rust with a rag or old toothbrush.

Tape threads of clean shower arm
Apply 2-3 turns of tape tightly around the threads of the shower arm. Press taping into the grooves of the treads. Wrap the tape in a clockwise direction so it doesn't become undone when screwing on the new shower head.

Attach the new shower system
Please follow the diagram.

Please make sure to use the washers provided. Twist each part clockwise by hand first. After placing a piece of cloth onto the shower arm base for protection, use pliers on top of the cloth to hold the shower arm in place. With your other hand, use the adjustable wrench to turn the bracket clockwise as much as it will go. Attach plastic diverter, then overhead shower. After, attach shower hose, then shower head.

Turn on water
Turn on the shower and check for any leaks coming from the shower head. If there are any leaks, turn water off and reapply tape and tighten the shower system. Do not over tighten.

Operation

Selecting Spray Settings

Both the handheld and overhead shower heads feature 5 distinct spray settings. To change the spray pattern, simply rotate the dial on the face of the shower head until you reach your desired setting:

- **Power Mist:** A fine, invigorating mist.
- **Rain Spray:** A gentle, full-coverage rain-like stream.
- **Power Rain:** A more forceful, concentrated rain spray.
- **Power Massage:** A pulsating, targeted stream for muscle relief.
- **Rain & Massage:** A combination of the rain spray and power massage for a comprehensive experience.

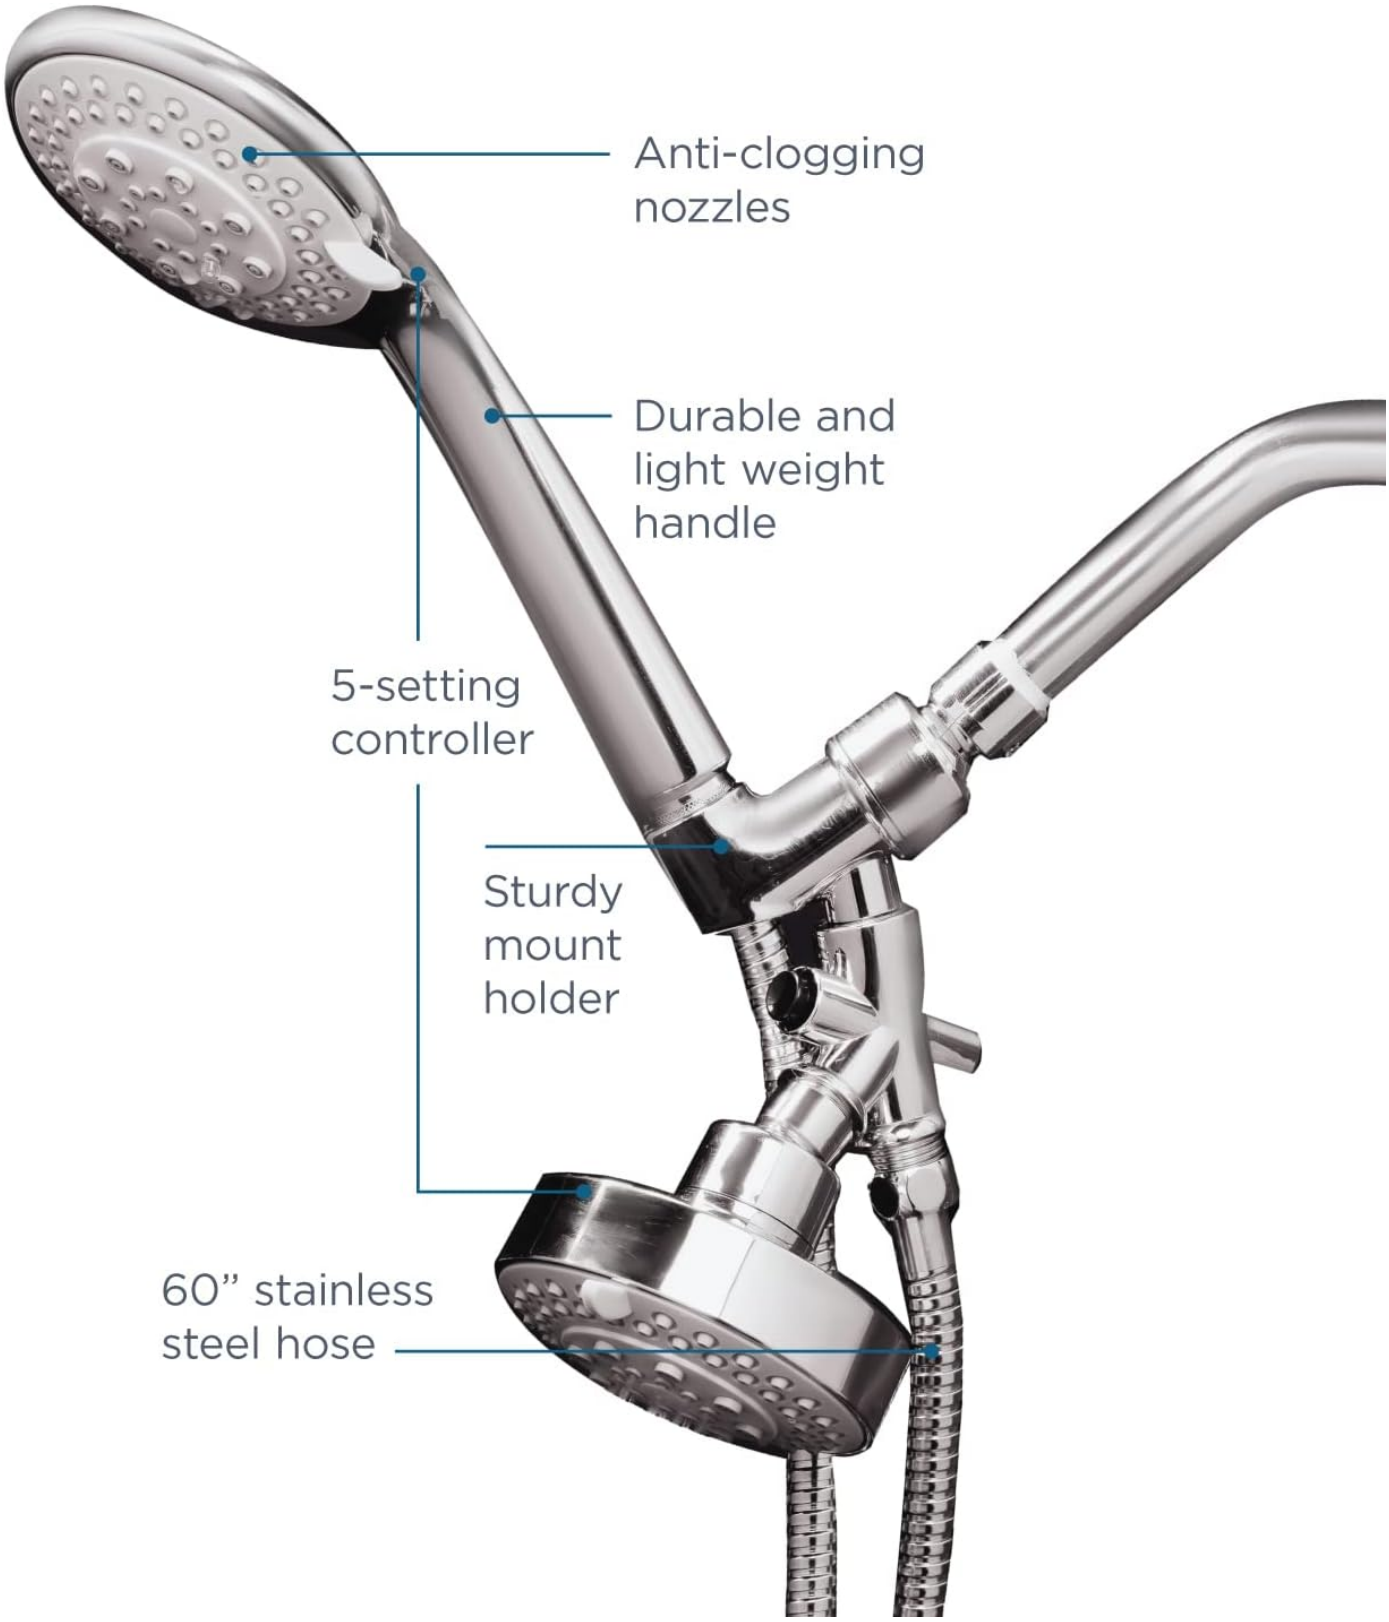

Image: A visual guide to the five distinct spray settings, showing the water pattern for Power Mist, Rain Spray, Power Rain, Power Massage, and Rain + Massage.

Using the Dual Shower System

The plastic diverter on the mounting bracket allows you to switch between the handheld shower, the overhead shower, or use both simultaneously.

- **Handheld Mode:** Directs water flow only to the handheld shower head.
- **Rainfall Mode:** Directs water flow only to the overhead shower head.
- **Combination Mode:** Directs water flow to both the handheld and overhead shower heads.

Image: An illustration demonstrating the three ways to use the shower system: as a handheld unit, as a fixed rainfall shower, or as a combination of both.

Maintenance

Cleaning Nozzles

The shower heads are equipped with anti-clogging nozzles. To maintain optimal performance and prevent mineral buildup, regularly clean the nozzles by gently rubbing them with your finger or a soft brush while water is flowing. This helps dislodge any mineral deposits.

General Cleaning

Clean the exterior surfaces of the shower heads, hose, and mounting bracket with a soft cloth and mild, non-abrasive soap. Rinse thoroughly with water and wipe dry. Avoid using harsh chemicals, abrasive cleaners, or scouring pads, as these can damage the finish.

Troubleshooting

Problem	Possible Cause	Solution
Low Water Pressure	Mineral buildup in nozzles; main water supply not fully open; kink in hose.	Clean anti-clogging nozzles (see Maintenance); ensure main water supply valve is fully open; check hose for kinks and straighten if necessary.
Leaks at Connections	Loose connections; insufficient plumber's tape; damaged washers.	Turn off water supply. Tighten all connections by hand, then gently with pliers if needed (do not overtighten). Reapply plumber's tape to threaded connections. Inspect washers and replace if damaged.
Difficulty Switching Spray Settings	Mineral buildup in the spray dial mechanism; debris obstructing the dial.	Rotate the dial vigorously to dislodge debris. Clean the shower head face and dial area. If problem persists, soak the shower head in a vinegar solution to dissolve mineral buildup.
Diverter Not Switching Properly	Debris or mineral buildup in the diverter mechanism.	Operate the diverter lever back and forth several times to clear any obstruction. If necessary, remove the diverter (with water off) and clean it.

Specifications

- **Brand:** BLACK+DECKER
- **Model Number:** BD0091
- **Material:** Stainless Steel
- **Finish Type:** Polished
- **Installation Type:** Wall Mounted
- **Number of Settings:** 5 (per shower head)
- **Hose Length:** 60 inches
- **Item Weight:** 0.75 Kilograms
- **UPC:** 840147800886

Warranty and Support

For warranty information, technical assistance, or to inquire about replacement parts, please refer to the manufacturer's official website or contact their customer service department. It is recommended to keep your purchase receipt as proof of purchase for any warranty claims.
