7. TROUBLESHOOTING

Problem	Possible Cause	Solution
Roaster does not turn on.	Not plugged in; power outlet malfunction; temperature knob set to "OFF".	Ensure the unit is securely plugged into a working outlet. Turn the temperature knob to a desired setting.
Food cooks unevenly.	Food not centered on rack; lid not properly sealed; incorrect temperature setting.	Ensure food is centered. Check that the lid is securely in place. Verify the temperature setting is appropriate for the food being cooked.
Smoke or odor during first use.	Residual manufacturing oils burning off.	This is normal for initial use. Ensure good ventilation. The odor should dissipate after the first use.
Food sticking to inner pot.	Not enough liquid; liner used at too high a temperature.	Ensure adequate liquid for slow cooking. If using a liner, ensure temperatures are below 350°F and water is used to prevent sticking.
