Proton Pure Portable HEPA Replacement Filter

Official Instruction Manual

INTRODUCTION

This manual provides essential information for the proper use and maintenance of your Proton Pure Portable HEPA Replacement Filter. Designed for the Proton Pure Air Purifier, this filter is crucial for maintaining optimal indoor air quality by capturing a wide range of airborne particles.

The Proton Pure filter utilizes a multi-stage purification system to ensure the air you breathe is clean and healthy. Regular replacement of this filter is vital for the continued efficiency of your air purifier.

Key Features

- **3-Step Air Purification Technology:** Features a mechanical pre-filter, True HEPA filter, and carbon filter for comprehensive air cleaning.
- **True HEPA Filtration:** Effectively removes microscopic particles as small as 0.3 microns, including allergens, dust, and pollutants.
- **360-Degree Air Intake:** Designed to draw air from all directions, ensuring efficient purification of the entire room.

3-STEP AIR PURIFICATION TECHNOLOGY

OUR FILTERS COME WITH THREE SEPARATE LAYERS THAT WILL SIGNIFICANTLY IMPROVE THE QUALITY OF AIR INDOORS.

SETUP AND INSTALLATION

The Proton Pure HEPA Replacement Filter is designed for easy installation. Follow these steps to replace your old filter and ensure proper functioning of your air purifier.

1. **Power Off:** Ensure your Proton Pure Air Purifier is turned off and unplugged from the power source before beginning the filter replacement process.
2. **Access Filter Compartment:** Locate the filter compartment on your air purifier. This is typically at the base or lower section of the unit. Gently twist or unlatch the cover to open it.
3. **Remove Old Filter:** Carefully remove the used filter from the compartment. Dispose of the old filter according to local waste disposal guidelines.
4. **Insert New Filter:** Unpack your new Proton Pure HEPA Replacement Filter. Insert the new filter into the compartment, ensuring it is seated correctly and securely. The filter is designed for 360-degree air intake, so its orientation within the compartment is flexible.
5. **Close Compartment:** Reattach the filter compartment cover, ensuring it is securely closed and latched.
6. **Power On:** Plug in your air purifier and turn it on. The filter replacement indicator on your purifier should reset automatically or can be manually reset according to your purifier's specific instructions.

OPERATING CONSIDERATIONS

While the filter itself does not have operational controls, its performance is directly linked to the Proton Pure Air Purifier. The filter enables the purifier's core functions:

- **Adjustable Airflow Speeds:** The purifier, with this filter installed, allows for multiple fan speed settings. Adjusting the speed will affect the rate of air purification.
- **360-Degree Air Intake:** The filter's design facilitates the purifier's ability to draw air from all directions, optimizing air circulation and purification throughout the room.

ADJUSTABLE AIRFLOW SPEEDS

DEPENDING ON THE AIR QUALITY OF THE ROOM YOU ARE IN, YOU MIGHT WANT TO BE ADJUSTING YOUR PROTON PURE AIR CLEANER TO ONE OF THREE FAN SPEED LEVELS.

360-DEGREE AIR INTAKE

THE FILTERS FOR THE PROTON PURE TRUE HEPA AIR PURIFIERS FOR HOME DON'T REQUIRE A SPECIFIC POSITION IN A ROOM.

MAINTENANCE

The Proton Pure HEPA Replacement Filter is designed for optimal performance over a specific period. Unlike some filters, HEPA filters are not washable and should be replaced, not cleaned, to maintain their effectiveness.

Filter Replacement Schedule

The lifespan of your filter depends on usage frequency and air quality. Your Proton Pure Air Purifier features a small display that will indicate when it is time to change the filter. It is recommended to replace the filter promptly when indicated to ensure continuous high-quality air purification.

TROUBLESHOOTING

If you encounter issues related to the filter or air purification, consider the following:

- **Reduced Airflow or Purification:** If you notice a decrease in airflow or the air quality does not seem to improve, it is likely time to replace the filter. A clogged filter can significantly reduce the purifier's efficiency.
- **Unusual Odors:** While the carbon filter is designed to absorb odors, a persistent or new unusual odor might indicate that the filter is saturated and needs replacement.
- **Filter Indicator Light:** If the filter replacement indicator light on your purifier remains on after installing a new filter, refer to your air purifier's specific manual for instructions on how to reset the filter life monitor.

- **Improper Installation:** Ensure the filter is correctly seated within its compartment and the cover is securely closed. Improper installation can lead to air leakage and reduced effectiveness.
