## Hurom H200

# Hurom H200 Easy Clean Slow Juicer Instruction Manual

Model: H200 | Brand: Hurom

## INTRODUCTION

---

This manual provides detailed instructions for the safe and efficient operation, maintenance, and care of your Hurom H200 Easy Clean Slow Juicer. Please read all instructions carefully before using the appliance for the first time and retain this manual for future reference. The Hurom H200 is designed to extract nutrient-rich juice from various fruits and vegetables using a slow-squeezing technology, minimizing oxidation and preserving natural flavors.

## PRODUCT OVERVIEW: COMPONENTS

---

Familiarize yourself with the various parts of your Hurom H200 juicer before assembly and operation.

## Optimal Delivery

The chamber is tilted at 7 degrees so that the juice will slide right out without making a mess.

Image: A detailed diagram illustrating the key components of the Hurom H200 Slow Juicer, including the Self-Feeding Hopper, On/Off Switch, Easy Clean Chamber, Juice Spout, Pulp Outlet, Built-In Pulp Container, and BPA-Free, Impact-Resistant ABS Plastic housing.

- **Self-Feeding Hopper:** Designed to accommodate whole fruits and vegetables, reducing prep time.
- **On/Off Switch:** Controls the power to the unit.
- **Easy Clean Chamber:** The main juicing chamber where produce is processed.
- **Juice Spout:** Dispenses the extracted juice.
- **Pulp Outlet:** Expels the dry pulp after juicing.
- **Built-In Pulp Container:** Collects the expelled pulp for easy disposal.
- **BPA-Free, Impact-Resistant ABS Plastic:** Ensures durability and safety of materials in contact with food.

## SETUP

Before first use, and after each cleaning, ensure the juicer is correctly assembled.

# Hurom

The upgraded H200 from the inventor of the slow juicer.

Image: The main components of the Hurom H200 juicer disassembled, showing the hopper, auger, and strainer ready for assembly or cleaning.

1. **Unpack:** Carefully remove all components from the packaging.
2. **Initial Cleaning:** Wash all detachable parts (hopper, auger, strainers, chamber, pulp container, juice cup) with warm, soapy water. Rinse thoroughly and dry completely.
3. **Assemble Chamber:** Place the inner spinning brush into the chamber, then insert the fine strainer (or coarse strainer, depending on desired pulp level) into the chamber.
4. **Insert Auger:** Place the auger into the center of the assembled chamber, ensuring it is seated firmly.
5. **Attach Hopper:** Align the self-feeding hopper with the chamber and twist clockwise until it locks into place. Ensure all parts are securely aligned; the juicer will not operate if components are not correctly seated.
6. **Position Containers:** Place the juice cup under the juice spout and the pulp container under the pulp outlet.
7. **Connect Power:** Plug the power cord into a grounded electrical outlet.

## OPERATING INSTRUCTIONS

---

The Hurom H200 is designed for ease of use, allowing for minimal prep and hands-free juicing.

### Juicing Process

1. **Prepare Produce:** For most fruits and vegetables, minimal chopping is required due to the large self-feeding hopper. Simply wash produce thoroughly. Remove large seeds (e.g., peach pits) and hard skins (e.g., pineapple rind).
2. **Load Hopper:** Place whole or large pieces of fruits and vegetables into the self-feeding hopper. The smart hopper will automatically feed the produce into the auger.
3. **Start Juicing:** Turn the On/Off switch to the 'ON' position. The auger will begin to rotate slowly, pressing the produce.
4. **Monitor:** The juice will flow from the juice spout into the juice cup, and the pulp will be expelled into the pulp container.
5. **Reverse Function:** If the juicer becomes clogged or stops, switch to the 'REV' (Reverse) position for a few seconds to clear the blockage, then switch back to 'ON'.
6. **Finish Juicing:** Once all produce has been processed, turn the On/Off switch to the 'OFF' position.

## Tips for Optimal Juicing

- **Variety:** Juice a mix of hard and soft ingredients. For leafy greens, roll them into a tight ball before placing them in the hopper.
- **Continuous Juicing:** For best results, feed ingredients at a steady pace, allowing the juicer to process them thoroughly.
- **Yield:** The slow-squeezing technology ensures maximum juice yield and minimal oxidation, resulting in fresher, more nutrient-rich juice.

# Inventor of *the Original* Slow Juicer

50+ years of relentless research and development in the pursuit of juice perfection.

Image: The Hurom H200 juicer efficiently processing oranges, demonstrating its ability to handle citrus fruits.

## Clean in Seconds

Features strainers with elongated grooves instead of small holes, providing a scrub-free cleaning experience.

Image: The large self-feeding hopper of the Hurom H200 accommodating whole apples and lemons, highlighting the minimal prep feature.

Video: Demonstration of the Hurom H200's minimal prep work feature, showing how whole fruits can be added to the juicer without extensive chopping.

## MAINTENANCE AND CLEANING

The Hurom H200 is designed for easy cleaning, with parts that detach for hassle-free rinsing.

### Cleaning Steps

1. **Disassemble:** Turn off and unplug the juicer. Disassemble all detachable parts: hopper, auger, strainers, chamber, juice cup, and pulp container.
2. **Rinse:** Rinse all parts under running water immediately after use. The strainers feature grooves instead of small holes, making them easier to clean without scrubbing.
3. **Wash:** Use a soft brush and warm, soapy water to clean any remaining pulp or residue. Pay special attention to the auger and strainers.

4. **Dry:** Dry all parts thoroughly before reassembling or storing to prevent water spots and odors.
5. **Base Unit:** Wipe the main body of the juicer with a damp cloth. Do not immerse the base unit in water.

*Note: The product specifications indicate that the juicer is not dishwasher safe. Please hand wash all components.*

## Save Time and Reduce Mess

No chopping required. Add whole-sized fruits to the upgraded Self-Feeding Hopper V2. Ready in minutes.

## Other Juicers

Shreds fruit and vegetables

Less nutrients, more oxidation

Damages ingredients

Watery, pale juice

Complicated, expensive maintenance

## HUROM

Revolutionary juice extraction

More nutrients, minimal oxidation

Preserves flavor and nutrition

Vibrant, full flavored

Simple, easy, economical

## TROUBLESHOOTING

If you encounter issues with your Hurom H200, refer to the following common problems and solutions.

| Problem | Possible Cause | Solution |
|---------|----------------|----------|
|---------|----------------|----------|

| Problem                                                | Possible Cause                                                              | Solution                                                                                                                                                                                                        |
|--------------------------------------------------------|-----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Juicer does not turn on.                               | Not plugged in; parts not assembled correctly; power outage.                | Ensure power cord is securely plugged in. Check that all components (chamber, auger, hopper) are correctly assembled and locked into place. Verify power supply.                                                |
| Juicer stops during operation or makes grinding noise. | Overload due to hard ingredients or too much produce at once; pulp buildup. | Turn off the juicer, then use the 'REV' (Reverse) function for a few seconds to clear the blockage. If the issue persists, disassemble and clean the parts, then reassemble. Feed ingredients at a slower pace. |
| Pulp is wet or juice yield is low.                     | Strainer clogged; improper assembly; type of produce.                       | Ensure the strainer is clean and free of debris. Verify all parts are correctly assembled. Some very soft or fibrous produce may naturally yield wetter pulp.                                                   |
| Juice leaks from the bottom.                           | Improper assembly of the chamber or seals.                                  | Disassemble the juicing chamber and reassemble carefully, ensuring all seals and components are properly seated and aligned.                                                                                    |

## SPECIFICATIONS
