ZTNA is an integrated component of the Fortinet Security Fabric, that ensures only verified & compliant users/devices can access sensitive data stored in both private and SaaS applications.

In addition to private apps, the Fortinet ZTNA solution includes comprehensive Cloud access security broker (CASB) technology to inspect, secure and control SaaS application data in-motion (inline CASB) or at-rest (API-based CASB).

A ZTNA deployment consists of 2 parts:

- **ZTNA Agent** may connect from anywhere, to access applications hosted in the company data center, cloud data center or SaaS. These endpoints are continuously monitored by FortiClient to ensure up-to-date posture information, and to secure each connection automatically without user involvement.
- **Access Proxy** sits inline, and continuously validates the posture and identity of each connection, and provides secure microsegmented access for each session. The access proxy is a feature of FortiGIDS and natively integrated with FortiGate deployments on-premise, in public cloud, or as a service in the case of SASE.
