Stage 1: Parent-Controlled Pushchair (Approx. 10+ Months)

- **Configuration:** Use with the parent push handle, sun canopy, safety bar, and footrests. The child is fully secured by the harness and safety bar.
- **Function:** The parent steers and pushes the tricycle. The child's feet rest on the footrests, and the free-wheel device can be engaged to prevent pedals from turning.
- **Safety:** Ensure the safety harness is snug and the safety bar is locked.

Stage 2: Assisted Riding (Approx. 15+ Months)

- **Configuration:** The safety bar and extended backrest can be removed. The parent push handle and canopy remain.
- **Function:** The child can begin to steer and attempt to pedal while the parent still provides guidance and propulsion with the push handle. The steering restriction helps maintain control.
- **Safety:** Keep the safety harness fastened.

- **Function:** The child steers and pedals the tricycle on their own. The steering restriction can be disengaged for full steering control if desired, or kept engaged for added stability.
- **Features:** The tricycle includes a horn for interactive play and a rear basket for carrying small items.

- **Washable Covers:** The seat cover is washable. Refer to the care label on the fabric for specific washing instructions.
- **Inspections:** Periodically check all screws, bolts, and fasteners to ensure they are tight. Inspect wheels for wear and ensure they spin freely.
- **Storage:** Store the tricycle in a dry place, away from direct sunlight and extreme temperatures, to prevent material degradation.

Troubleshooting

If you encounter issues with your tricycle, consider the following common solutions:

- **Assembly Difficulties:** If parts do not fit, re-examine the assembly diagrams carefully. Ensure you are using the correct parts for each step and that they are oriented correctly. Sometimes, a slight adjustment or re-attempt can resolve fitting issues.

- **Loose Parts:** If any part feels wobbly or loose after assembly, check all corresponding fasteners and tighten them securely. Do not overtighten.
- **Steering Issues:** If the steering feels stiff or unresponsive, check for any obstructions around the steering mechanism. Ensure the steering restriction is set appropriately for the child's stage.
- **Pedal/Wheel Movement:** If pedals are not turning or wheels are stiff, check for debris or obstructions. Ensure the free-wheel device is correctly engaged or disengaged as needed.
